### Want Ads

FOR SALE—Kitchen Range, Brussels Rug, 9 x 12, and many other household effects.—Apply to Mrs. Thos. Allen, Phone 104, Raymond.

LADIES HATS—Going at one-third discount for the next 2 weeks. Act quickly and take first choice.—Raymond Millinery Parlor, first door west of the Opera House.

TOYS—Call and see Rulon Boyson's toys before making your Xmas purchases.—Toy Chairs, Tables, Kiddy Cars, Rocking Horses, etc. etc.—Rulon Boyson, Raymond.

FOR SALE—New Kitchen Cabinet. Also 90 Sheep including 50 Ewes, 40 lambs, and one extra fine Ram. Rambouillet breed. Good terms and will sell at bargain. Apply Heber Christensen, Raymond.

TO HELP the boys and girls in our Apple Naming Contest we have decided to place a sample of each variety on display with its name attached. This will facilitate the correct naming of the numbered bowls of apples. Those who have already submitted lists have the privilege of handing in a second list. Naming of the varieties of our apples has proven to be more difficult than expected, so we have taken the above step to help matters along. Observe closely each apple with name attached; write it down and tell which bowl of apples it belongs to. A box of apples and two boxes of candy will be given as prizes to the first three nearest correct lists.—Raymond Mercantile Co.

THE WANT AD will sell, buy or trade it for you. Try it.

Miss Delvar Meldrum is now employed at the Broadway Store.

The romance of a world cruise culminated in New York City recently when Dorothy Holmes O'Ryan, daughter of Major-General and Mrs. John F. O'Ryan, of New York, married Darwin Curtis, of Chicago. The couple met for the first time a year ago on board the Canadian Pacific liner Empress of France which was then making a tour of the world. It is feared they had no eyes for the world marvels which were unrolled before them on the tour, since it is stated they fell in love at first sight and could only see each other. The marriage was performed by the Rev. Father Francis P. Duffy, chaplain of the "Fighting Sixty-ninth," a regiment commanded by the bride's father during the war.

Good reading for Canadian Pacific shareholders is furnished in the September statement of gross earnings, working expenses and net profits. It has been the most favorable month for the company in a long time. The gross earnings were \$18,909,071, the greatest shown in any month since October, 1924. Operating expenses were \$12,641,452 and the difference between the two, the net profits \$6,267,619, an increase of \$1,719,973 over the corresponding month of last year. Net earnings for the first three quarters of this year, ending September 30th, is \$1,190,039 greater than the 1924 figures, despite a decrease in gross earnings of over four and a half million dollars. This was made possible by the company's policy of rigid economy.

To bring the Arctic within the scope of tourist traffic is the object of the Marquis M. N. de la Abiz, winter sports director at Lake Placid, who is organizing pack horse trips of thirty days' duration next year from the Canadian Pacific Rockies as far north as the Columbia Ice Fields within the Arctic Circle. "We are going to swim our horses and outfit across the Saskatchewan River and camp near the sources of the Athabasca which empties into Great Slave Lake and thence into the Arctic," the Marquis asserts. The first of these trips is scheduled between June 28 and July 27 next year.

### W.I. Officers Elected

The following are officers elected at the re-organization meeting of the Women's Institute held last Thursday:

Pres. Mrs. A. W. Kirkham, 1st Vice Mrs. S. B. Card, 2nd Vice Mrs. L. L. Paek, Secretary Mrs. Frank Shaw. Directors: Mrs. Ralph, Mrs. Thos. Allen, Mrs. Baker, Mrs. Jas. Costley, Mrs. Wm. Clemis. Constituency Representative, Mrs. Frank Leavitt.

### More Light Needed

Now that the long winter evenings are with us the street lights should be attended to. Another good thing would be to put up more lights in all parts of the town. Nothing helps the appearance of a town more than to be well lighted at night. In some portions of the town the few lights burning serve merely to blind the pedestrian and are little better than no lights at all.

### Stolen Car Recovered

Dr. K. I. Murray received the information on Wednesday night that his Dodge sedan had been recovered by the Provincial Police at Milk River. The car was stolen from the doctor's garage on Tuesday night, an entrance being forced by breaking the lock.

On this night George O'Brien, night workman at the power plant, received a visit from a man who wished to know the way to Lethbridge, also the road to Colesburg. The man had left his car a short distance up the road. It was this fact which aroused Mr. O'Brien's suspicions. The police took his written statement and description of the man, and began their work with the result that the abandoned car was found at Milk River, although it seems that the thieves have made good their escape.

### Here and There

Wishing farewell and bon voyage to the celebrated writer of the Scarlet Pimpernel, a bouquet of scarlet pimpernels was presented to Baroness Orczy, when she embarked with her husband, Mr. Montagu Barstow, on the S.S. Montclare of the Canadian Pacific line, for England. The presentation was made on behalf of the company by Capt. Geo. Webster and President E. W. Beatty's card was attached. Baroness Orczy came out to Canada to assimilate local colour for a new book, which will be eagerly awaited here.

Motor tourists from the United States brought \$150,000,000 in revenue to Canada in 1925, according to estimates of government officials. This sum is equal to a quarter of the value of the Dominion's wheat crop and approximates the value of the annual mining output of Ontario, Quebec and British Columbia combined. More than 2,000,000 American automobiles, it is estimated, have crossed into Canada this fall. They carried in the neighbourhood of 9,000,000 persons, or a number equal to the total population of Canada.

C. B. Foster, passenger traffic manager of the Canadian Pacific, states that the success of the crop in the West this year will make money more free and is bound to stimulate travel between Canada and the Old Country. To handle the expected increased volume of traffic, his company, he states, will run special trains early in December connecting directly with the company's Atlantic liners, sailing from the winter port of Saint John, N.B. These liners sail on dates that are calculated to get passengers home to any point in the British Isles or the near continent in plenty of time for Christmas.

### New Law Office Here

Ostlund and Brown, barristers of Lethbridge, opened up a law office here yesterday, in the Security Block, and will be here every Thursday in future. They have also opened an office in Magrath and will spend every Wednesday in the Garden City.

### Volunteers Mission

Geo. W. Green has volunteered to go as one of the special six months' missionaries. He left last Tuesday for Salt Lake City en route to Florida, where he will labour.

### Ounce of Prevention

By Dr. C. M. Hincks

All over the world a new type of hospital is being built—the psychopathic hospital, where people who have mental troubles are studied and treated.

The very words, psychopathic hospital, indicate the new theories of medical experts—that mental troubles may be studied and successfully treated. A psychopathic hospital is also an aid in prevention. Prevention of the bad mental traits that frequently lead to insanity is part of the field of the science of mental hygiene.

The best time to prevent traits which in later years develop into forms of insanity, is in the very earliest years of childhood. Good habits of thinking are as easily formed as bad ones. Discipline, self control, courage, affection and loyalty, the strength of character and the qualities of personality that make for contentment and a happy useful life can be developed in children by curbing the bad and encouraging the good by personal example and precept. As in everything else, an ounce of prevention is worth a pound of cure.

### Two Sides

There are two sides to every question. This is just as true in advertising as in an argument. In advertising there is the side of the advertiser and the side of the public.

From the viewpoint of the advertiser in the newspaper, advertising is a means of increasing his volume of business. Commercial development has made advertising as necessary to retail business as customers. Without customers the advertiser could not remain in business, so he advertises to attract customers.

The other side of the question is that of the public. To the public newspaper advertising means the bringing of the store show cases to the office and living room. It is a service extended to the public by the advertiser, because it aids the customer in ascertaining where that which is wanted can be purchased at the most advantageous price. Newspaper advertising has abolished shop-searching. To save time for the shopper strengthens his day.

So although there are two sides to newspaper advertising, there is no disagreement between the two. Finding that advertising serves the public as well as business the merchant has two reasons instead of one for advertising, and the customer learns that the most progressive merchants are the most extensive advertisers, so there is a double attraction. By the nature of business, if advertising didn't help the buying public it could not help the advertiser.

## The Political Situation

The result of the general Dominion elections held on October 29 is not a good thing for Canada. It creates a new House of Commons in which one political group commands a majority and consequently a situation is brought about where it is impossible to have a strong Government able to carry its policies into effect and give the country effective and efficient administration.

A majority of the constituencies rejected the policies of the King Government, but, while disapproval of the Government and its policies was thus recorded, neither did a majority of the constituencies express approval and extend support to the leadership and policies of the Conservative Opposition. In an ever more emphatic way the country as a whole rejected the Progressive Party.

A condition of "stalemate," a deadlock, ensues, which apparently it will require another appeal to the electorate to break. In other words, for the time being at least, there must be a "marking of time," a period of drifting, which is an extremely bad thing for any country, and especially so for a young country like Canada with a number of serious national problems demanding vigorous and constructive action.

Comment by "the man in the street" is, of course, largely colored by his party affiliations but all too frequently an amazing ignorance of the constitutional position of affairs is disclosed. Without in any way touching on the party aspect of the situation, it may be well to clearly state the constitutional position.

If the Government of the day is clearly defeated in a general election, the practice both in Great Britain and in Canada is for that Government to immediately resign, and for the Premier to advise the Governor-General to call on the leader of the victorious Opposition party to form a new Government. But a defeated Government is not obliged to take this action; it can continue in office and meet Parliament and is not obliged to resign until it suffers defeat in the House of Commons. That is to say, the tenure of office by any Government rests with the House of Commons.

But, if following a decisive defeat in a general election, the Government did not resign the Governor-General can take cognizance of that defeat and take responsibility for dissolving his Ministers and calling upon the Leader of the Opposition to form a new Administration. In this event the new Ministry must obtain a vote of confidence from Parliament otherwise the usefulness of the Governor-General is past.

However, in the election last month, while the Government failed to secure a majority, so, too, did the Opposition. Consequently the Government would be justified in continuing in office and asking Parliament for a vote of confidence, relying on a combination of Liberals and Progressives to reach such a vote. If, on the other hand, the Government resigns and Mr. Meighen is asked to form a Government, it is quite evident he could not command a majority in the House of Commons as at present constituted, and another election would become immediately imperative.

Mr. King is, however, confronted with a second problem. If he decides to await a verdict from Parliament, he must in view of his personal defeat and the defeat of one-half of his Ministers, reconstruct his cabinet. This involves a series of by-elections. In the present indecisive state of public opinion it is doubtful if these Ministers could be elected.

Furthermore, for the King Government to continue in office any length of time under present conditions would be to perpetuate the unsatisfactory situation in the House of Commons and Government which Mr. King himself in advising dissolution of Parliament, urged as one outstanding reason why an election at this time was necessary, namely, to provide a Government with a clear mandate and a working majority. Mr. King further announced that if the election did not result in providing such a clear working majority he would again appeal to the country.

Disturbing and expensive though it would be, the logic of the situation points to another election without loss of time. Whether Mr. King remains in office, re-constructs his cabinet, and calls that election, or whether he resigns and Mr. Meighen forms a cabinet and then goes to the country, is a matter for Mr. King and his advisers to decide, and possibly before this article is published a decision will have been made. But as in any event it is quite evident that the holding of another election cannot long be deferred—and in the interests of strong, stable government in Canada should not be deferred—then the sooner it is held and the whole situation clarified, the better for Canada.

### New Journalistic Venture

A new venture in journalism has appeared in Ottawa in the publication of the Jewish Herald, a weekly periodical emphasizing the ideals of Judaism. It contains concise world dispatches pertaining to Jewish activities, short and timely efforts, interesting sketches of various leaders of the race, as well as other topics of the day.

### Settlers From Sunny Italy

It is reported that banking interests in Northern Italy are negotiating for the purchase of forty thousand acres of farm land in Manitoba, on which it is planned to settle five hundred families of Italian agriculturists. If the deal is consummated, it is planned to bring the vanguard of settlers next spring.

### Exploration Chief In Far North

The Canada Gazette announces the appointment of G. P. MacKenzie to the position of exploration and development officer of the Canadian Arctic under the North West Territories and Yukon branch, department of Interior. Mr. MacKenzie was in command of the last Arctic expedition which returned from the north a few weeks ago.

### Manitoba Dairy Industry

The growth of the dairy industry in Manitoba is well illustrated by a comparison of the figures of production in 1900 and 1924. In 1900, the total value of dairy products produced in Manitoba was \$1,681,305. Last year it was \$13,093,902. In 1921, 198 carloads of creamery butter were exported from Manitoba totalling 4,335,200 pounds.

### Canadians Win At Fruit Show

Awarded Several Prizes At Exhibition In London, England

For the third year in succession, Canada has won premier honors in the British Empire section of the Imperial fruit show at London, England. First, second and third prizes for dessert apples went to the Associated Growers of British Columbia, Limited, Vernon, B.C., with Jonathan, McIntosh and Winesap apples.

The Ontario Fruit Growers' Association took first prize in cooking apples with Greenings; second and third going to the Associated Growers of British Columbia, Limited.

One first prize in the overseas section was won by the Associated Growers of British Columbia, Limited.

### BEAUTIFY IT WITH

#### "DIAMOND DYES"

Just Dip To Tint or Boil to Dye

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings—everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

### Railway Safety Device

Radio-Controlled Attachment May Greatly Lessen Danger of Accidents

A radio-operated safety device that checks speeding locomotives automatically when danger looms ahead was given a successful demonstration over a 10-mile stretch at Pere Marquette Railroad track recently. The test was in the presence of officials of the Pere Marquette, the Michigan Central and Thomas E. Clark, of Detroit, inventor of the device.

Following the demonstration, railroad officials said they believed the invention, if generally adopted, would result in the saving of thousands of lives by preventing railroad accidents and millions of dollars in equipment destroyed in wrecks.

By means of a system of radio-controlled signal lights installed in the engine car, it was demonstrated that the engineer can be forewarned of impending disaster, making it possible for him to know many minutes in advance if danger is ahead. Should the engineer be disabled or dead, the system of control checks the engine's speed and brings it to a halt at any danger point, at any time.

### World Wheat Production

Higher Than 1924 and the Five-Year Average But Less Than In 1923

The estimated production of wheat in 31 countries of the world this year totals 2,834,547,000 bushels. This is 199,756,000 bushels more than the production of 1924 in these countries, and it is 144,110,000 bushels greater than the average annual production for the five years 1919 to 1923. These figures are compiled by the Dominion bureau of statistics from official data.

For the same 31 countries, the production of wheat in the abundant year, 1923, was 2,998,577,000; so that while the production of 1925 is superior to that of 1924, and also to that of the five-year average, it is less by 164,430,000 bushels than the 1923 crop. The figures include all the important wheat-producing countries of the northern hemisphere, excepting the Soviet republics. A number of smaller countries have not yet reported, but their total wheat production would not exceed 85 million bushels.

### When hoarse use Minard's Liniment

First Warning For Christmas Mail  
The British post office has issued a warning that all persons who desire to send Christmas presents to the Old Country should mail them long in advance of the holiday. The warning is to avoid delay of packages similar to that which occurred last year owing to the great congestion in the mail.

German scientists have made leaves of gold and nickel so thin that it would require 2,500,000 of them to measure an inch in thickness.

United States distributed its first issue of stamps in 1849.

New York policemen are fined one day's pay for causing out citizens.

### Indian Boy Becomes An Operatic Star

Member of Mohawk Tribe Has Achieved Artistic Fame

Twelve years ago an Indian lad, selling the baskets of his handicraft at Lake of Bays in the Highlands of Ontario, attracted the attention of a gifted Toronto woman by his voice. And now Os-Ko-Non-Ton (Running Deer) has passed through Toronto after a holiday spent at Lake of Bays on his way back to New York, with before him another successful season on the concert platform in the United States, and, next spring, a return to Europe, where he has already achieved artistic fame, for in London last season he sang the part of the Medicine Man in the grand opera production of Hiawatha, and was made much of by royalty and society.

Os-Ko-Non-Ton, this first of his race to become an operatic star, was born on the banks of the St. Lawrence in Quebec, member of the Bear clan of the Mohawk tribe of the great Iroquois nation, and so is cousin to Pauline Johnson, the gifted Indian poet, whose short life did so much to enrich Canadian literature. And of this same Mohawk tribe sprang two other Indians, each famous in his day. Dr. Oronhyatekha, educated at Oxford by the Prince of Wales (Edward VII.), and founder of a great benevolent institution, and Tom Longboat, the Indian athlete, who for a while swept all before him on the eluder track.

### WHY RHEUMATISM OFTEN COMES BACK

The Usual Treatment Does Not Reach the Root of the Trouble

Most treatments for rheumatism do not aim to reach the root of the trouble in the blood and circulatory system to overcome that particular attack. Then when the system becomes run-down from any cause the disease again gets the upper hand and it all has to be done over.

Sufferers from rheumatism who have found their condition unrelieved or actually growing worse while using other remedies, would do well to try Dr. Williams' Pink Pills. The tonic treatment with this medicine has proved in thousands of cases that it builds up the blood to a point that enables it to cast out the rheumatic poisons through the regular channels, the bowels, kidneys and the skin. When this is done rheumatism is banished, and as long as the blood is kept pure and rich the patient will be immune from attack. This is fully proved by the case of Mr. Samuel Zinek, Upper Marlboro, N.S., who says: "For a long time I was a great sufferer from rheumatism which settled in my hip and down by leg to the knee. At times the pain was so great that I could not walk. I tried liniments and medicines but without getting more than mere temporary relief. Then one day a friend called who said that he had been afflicted with this trouble which was banished by Dr. Williams' Pink Pills, and urged me to try them. I did as advised and after using a few boxes there was no doubt they were helping me. Not only was the rheumatism disappearing, but my general health was improving. I continued the pills until I had taken about a dozen boxes when every trace of the trouble had disappeared, and I have not felt a twinge of it since. I may add that my wife used these pills for a run-down condition with equally good results."

You can get these pills from any medicine dealers or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

### Oldest Mariner of Pacific

Captain George Marchant, said to be the oldest mariner on the Pacific coast, died at Vancouver recently aged 82 years. He came to this country from England on a sailing vessel in 1867. Later he became skipper of the Beaver, the first steamboat to ply on the Pacific Ocean, and was in command of that vessel when it ran ashore in English Bay off Stanley Park and became a wreck in 1883. He also piloted the first steamboat ever to enter False Creek here.

### SUNDAY SCHOOL LESSON

NOVEMBER 15

#### PAUL'S ARREST IN JERUSALEM

Golden Text: If a man suffer as a Christian, let him not be ashamed. 1. Peter 4:16.

Lesson: Acts 21:17 to 22:30. Devotional Reading: Psalm 125:1-5.

#### The Text Explained and Illumined

Paul's Report to the Church at Jerusalem, verses 17:19.—Paul came to Jerusalem with a wonderful story of how the gospel message had been received among the Greek Jews and Gentiles, and with abundant proof of their regard for the mother church, in the collection which they had contributed out of their deep poverty. The leaders of the church at Jerusalem received Paul cordially, and after his recital they glorified God. Luke's account, however, makes no mention of their gratitude for the help of the Gentile Christians. Apparently they passed at once to what was uppermost in their own minds.

The least that one can do to show that he is grateful is to say so. Gratitude is one of the cardinal virtues. We should be scrupulously careful to thank everyone who does anything for us, but, on the other hand, we should be as scrupulously indifferent when those for whom we do anything fail to thank us. Giving one's services on any other basis would be a miserable affair. "It is another's fault if he be ungrateful; but it is mine if I do not give," declared Seneca.

#### Joint Soreness Subdued, Swellings Quickly Reduced

Wonderful Results From Rubbing the Sore Parts With

### NERVILINE

"My testimony should convince anyone that 'Nerviline' is a splendid preparation to use on swollen joints. Rheumatism left me badly crippled," writes Amos F. Fleury, from Kingston. "I went to McKay's Drug Store and they recommended Nerviline, which restored me completely."

For rheumatic pains, Lumbago, Sciatica, you will get lasting satisfaction from a 35c bottle of Nerviline. Sold everywhere.

### Famous Watchdog Dead

Was Familiar Figure Around Geneva Headquarters of League of Nations

Bristol, the famous St. Bernard watchdog of the League of Nations headquarters at Geneva, is dead. He was washed specifically for the sixth assembly, and it is thought he must have caught a cold. The next day he was suffering pain, and a dose of opium was injected, death taking place at once. Bristol—whence he got the name is not known—was about 15 years old, and originally belonged to an Italian count, who was a resident in the Hotel National before it was taken over by the league. The St. Bernard had been a watchdog since the foundation of the league, and was probably the most familiar figure there. All day the delegates at the assembly, and many others, were inquiring as to the state of his health. He was known and loved by everyone. Bristol is to be buried in a grave in the front garden of the Palais des Nations.

### More Home For the Child

Interested Parents Can Do More For the Child Than Anyone Else

Today the parents of Canada hand over their children to the schools and expect the schools to do everything but buy their clothes. Special teachers sound out their little brains; special doctors poke into their little teeth; other doctors inspect their little lungs; Sunday school teachers are expected to smuggle their little souls into Heaven. It is all very nice and efficient. But it does not take the place of the home. One pair of genuinely interested parents can do more for a child than all the specialists on earth.—Vancouver Sun.

Worms cause fretfulness and rob the infant of sleep, the great nourisher. Mother Graves' Worm Exterminator will clear the stomach and intestines and restore healthfulness.

### Once Considered Gentee

When toothpicks were first introduced into England from France and Italy centuries ago their use was considered a mark of gentility. To show themselves possessed of such an instrument men of fashion wore them in their handbuds.

### Homesteads in Alberta

A total of 71 homesteads were filed on during the month of September in the Edmonton land district which includes a large territory in Central and Northern Alberta. In addition to this 11 soldier grants were filed on.

### Whales Often Migrate

Whales, it is believed, often pass from Antarctic to Arctic waters and a British expedition now in the southern seas will attempt to label a few of the animals in the hope of solving the problem of their migratory habits.

Prevent Grippe with Minard's Liniment

### Conquers Bad-Breath and is Popular Again

"The day I started taking Carter's Little Liver Pills," says Mr. John A. Perry of New York City, "my habitual bad breath and bad stomach stopped. I strongly recommend them to all those afflicted with these nasty troubles. I assure you that my own case was a bad one, causing me untold embarrassment, and Carter's helped me right from the start."

Bad breath comes from your stomach and can usually be relieved quickly by Carter's Little Liver Pills.

They are wonderful for constipation, sick-headache and indigestion and they physic the system in a mild and gentle manner, no bad after effects.

Recommended and for sale by all drug stores.

### Giant Trees Being Destroyed

Hundreds in England Fall When Roots Are Consumed By Underground

Peat Fires

Huge trees totter and eventually fall at Wedholme Dale, Cumberland, England, often without warning. Many giants of the forest, with trunks over four feet in diameter, are numbered among the hundreds of trees which have fallen. The reason is that for several weeks past a peat fire has been burning under the surface of the earth. As the roots of the trees are consumed, the trees wither and come crashing down. It is almost beyond human power to extinguish such an underground fire, these being similar to subterranean coal fires, which have been known to burn for many years before going out.

## A Novel Method Is Used By Overseas Representative To Advertise Canadian Goods

There was held at the Hotel Cecil on the Strand, London, England, on October 22nd, a somewhat novel dinner, to wit a dinner where every item on the menu, even to the tea cream, was actually produced in Canada. W. A. Wilson, agricultural products representative, had the task of planning the dinner and securing the materials for it. High Commissioner Larkin presided and the guests were members of the London provincial trade and the press.

In addition to arranging the dinner, Mr. Wilson was called upon to respond to the toast to the "Produce Trade of Canada," and portions of his address are of great interest to the producers of Canada inasmuch as they indicate what he, as representing them, has pledged them to provide for the British consumer. Mr. Wilson's reply was, in part, as follows:

As stated on the menu card, the dinner served consists of food products from Canada, and the kind reception and warm support accorded to me by new and old acquaintances alike in planning for and securing the necessary supplies, made the undertaking pleasant.

Canada needs people to cultivate her uncultivated lands; her producers need markets for their agricultural products, railway and steamship companies need tonnage; and business men need the public's buying power. The people of the United Kingdom need food and the respective governments have negotiated repeatedly concerning plans to provide homes in the overseas dominions for this country's surplus population. The surest road to a successful permanent emigration policy is to establish a market for the products produced by the people you encourage to emigrate and whom we welcome. The money you spend in buying our farm products, is, in a large measure returned to you in orders for manufactured goods.

There is an innumerable moral advantage and no material disadvantage in formulating a wide programme for marketing empire foods as a goal for the future and advancing to that goal step by step on occasion offers, rather than having exactly similar measures grudgingly forced out of one by popular clamor. Macaulay's description of the New Philosophy is fitting. He says: "It is law in progress. A point which yesterday was invisible is its goal today and will be its starting point tomorrow." Our commercial salvation lies in the practical use and development of the great resources and possibilities of trading within the empire.

The qualities so splendidly shown in the war did not finish when peace was declared, and whatever our difficulties are—and they are considerable—I am certain we can rely upon the integrity and determination of our race to come through them successfully. We are not going to be content with military achievement only to be beaten in time of peace by the difficult problems that confront us. To improve the economic conditions is our task, and through its accomplishment will come a greater measure of freedom, contentment and happiness.

Canada's responsibility in that effort is, broadly speaking, the production of commodities possessing quality and character sought after and demanded by the best trade in your largest markets; to produce them in volume and to produce them regularly; no detail in their preparation being too small to be unworthy of our best attention.

### Crime Increases

Crime in Chicago costs the city so much each year that it could well afford to pay each of its 20,000 crooks \$20,000 monthly or \$600,000,000 to leave town. C. R. Holden, president of the Chicago crime commission, told a church audience. He estimated that approximately one per cent. of the city's 3,000,000 population are engaged in criminal pursuits, and asserted that crime had increased 100 per cent. since 1900.

### Trophy For Corn Show

A solid silver cup measuring 18 inches in height has been presented to the Saskatchewan Corn Growers' Association by the Saskatchewan Wholesale Implements Association as a trophy for the novice class to be competed for annually at the provincial corn shows. This trophy will be awarded for the first time at the third provincial corn show to be held at Lethbridge on Nov. 13 and 19.

China invented the art of weaving 1,000 years before it was known in other countries.

W. N. 4. 1925

## Winter Care Of Poultry

Value of Substitutes for Green Feed in Poultry Feeding

During the winter months, when it is sometimes difficult to get suitable green feed for poultry, certain substitutes may be used. In order to test the relative values of clover leaves, sweet clover meal, alfalfa meal and tomato pulp for this purpose an experiment was conducted in 1923-24 by the Dominion poultry husbandman at the Ottawa experimental farm. One pen was given clover leaves fed in the litter once a day, another was given clover meal mixed in the wet mash fed at noon, a third pen received alfalfa meal in the same way, and to the fourth pen tomato pulp mixed in the wet mash was fed. All the hens were fed a standard scratch grain and standard mash, heat scrap was kept continually before them and they had both milk and water to drink.

The clover meal gave by far the best results for production, cost of producing eggs and profits. Tomato pulp came second, alfalfa meal third and clover leaves last. The hatchability of the eggs from the birds fed tomato pulp was, however, exceptionally poor.

## Good Apple Crop

Production This Year Is Expected To Exceed That Of 1924

Canada's commercial apple crop for this year is now estimated at an increase of three per cent. over 1924, or 2,950,335 barrels, according to a report of the federal department of agriculture. The commercial apple crop in Ontario is now placed at 174 per cent, or 1,190,885 barrels—this is a record for this province. British Columbia is expected to contribute 2,318,128 boxes; Quebec, 40,853 barrels; New Brunswick, 55,433 barrels; and Nova Scotia, 560,450 barrels. All the provinces, with the exception of Ontario, show decreases.

## Says Fish Industry

Second To Farming

Has Always Been One of Canada's Prolific Trades

The fish industry to Canada is second to agriculture, and since early

times the fish trade has been one of the most prolific of the country, said Daniel J. Byrne in giving addresses on Canadian fisheries at the request of the department of marine and fisheries. Consumption of fish per head per annum in Canada, he stated, is only 22 to 24 pounds, while in England it is 45 to 50 pounds, and in Japan more than 200 pounds.

## Registered Cereal Seed

Estimated That Alberta Produced 360,000 Bushels This Year

Alberta had 10,463 acres of registered cereal seed this past season, according to the applications for inspection made to the seed branch at Calgary. There were 278 growers of cereal seed and while it is yet too early to make a statement as to the amount of registered seed there will be this year, it has been estimated that there will be around 360,000 bushels from Alberta.

## Heavy Salmon Pack

British Columbia Catch Greater This Year Than Ever

British Columbia's salmon pack to date is in excess of the same period in 1924, and last year was one of the record years. Statistics published by the Dominion fisheries department show that the total pack up to October 5th in the present season is 1,376,442 cases. Last year at the same date the pack was 1,373,625 cases.

## Remembered His Manners

Little Mary was invited to a party. Before she left, her mother instructed her on table etiquette.

When Mary returned, her mother asked her how she behaved.

"Well," answered Mary, "when Mrs. B. passed the cake I took a piece. When she passed the cake a second time I said, 'Yes, thank you,' and when she passed it the third time I didn't know what to say, mother. So I said what daddy always says: 'Take the darn thing away!'"

## The Potential Killer

If judges, here and elsewhere, will keep in their minds the very important truth that the speeder and the reckless driver are potential killers, and not actual killers only because they have had good luck that they don't deserve, they will impose sentences that will discourage recklessness and speeding, and thus they will help to reduce the appalling number of automobile killings.—Duluth Herald.

## Saskatchewan Salt Lakes

Ingebrite Lake Contains Over Twenty-Five Million Tons of Glauber Salts

Sodium sulphate, sometimes known as "Marabille," or "Glauber Salts," is found in many of the Saskatchewan lakes. The largest one is at Ingebrite Lake, about 40 miles north of Hinton, on the Canadian Pacific Railway main line, but is not yet under development. It has been investigated by the Dominion Government and has an estimated content of over 25,000,000 tons of glauber salts, says the Flanagan Post.

Frederick Lake, south of Moose Jaw, near Dunkirk, is the most active commercial producer, a process of dehydration having been successfully consummated and shipments are being made to Eastern Canada and the United States. Another deposit under active development is at Lake Mushkiki, three miles north of Dana, on the Canadian National lines. There are a large number of these lakes in the province awaiting development, and when market requirements demand, greater attention to this resource will be given. Sodium sulphate in the form of salt cake is used in making wood pulp by the sulphate process, plate glass, window glass, bottles, water glass, etc. Glauber salt is used in dyeing, tanning, medicinally especially for the treatment of cattle, as a constituent of so-called stock feeds and so on.

## Fewer Veterinaries

Where Is the Picturesque Horse Doctor Of Bygone Days?

Fewer veterinaries—particularly of the "horse doctor" type, the picturesque figure who, muffled to the ears, would drive for miles to attend some animal's wants—are to be found today than at any time in the past two decades. Total registrations at the Ontario Veterinary College have dropped from 373 in 1914 to 70 at the present time. The demand for veterinary supplies and equipment is also now practically negligible. To some 650 men in all, according to the Ontario Veterinary Association, is entrusted the professional care for Ontario's livestock.

The answer is that quality and not quantity is wanted in the veterinary profession today. Sterile, whitewalled laboratories, where tireless workers peer through microscopes, today occupy the centre of the stage in the battle for better health of Canada's livestock.

## Use Novel Method

Steel To Combat Grasshopper Pest In Mexico

Upon a suggestion made by the American chamber of commerce of Mexico, a large order for steel sheets has been placed with a United States steel company to be used in combating the grasshopper plague devastating sections of Southern Mexico.

The method to be employed is to build barriers across the line of march of the grasshoppers, before they reach the flying stage of their development, against which the grasshoppers will pile. Then they are to be raked back by watchmen into pits, after which they are to be sacked and sold as poultry feed.

The method outlined above has been extensively used in the Argentine republic where 32,000,000 pounds of grasshoppers each year are destroyed.

## Keeping Radio Going

Radio stations operated by the Royal Canadian Mounted Police in Northern Manitoba will be kept in service during the winter months. The stations are located at Victoria Beach, Norway House and Cormorant Lake.

We doubt if even a great and famous orator could explain to a barber exactly how he wanted his hair cut.

## Keeping Milking Records

Practice of Weighing the Milk Is Recommended to Dairymen

A practice that is generally followed and advocated at the illustration stations in Eastern Quebec conducted under the Dominion experimental farms branch is that of weighing each cow's milk. There are too many cows, says the supervisor in his annual report, that do not produce sufficient to pay for their feed. By weighing the milk these animals can of course be identified and eradicated. The average of thirteen herds is given as 5,245 pounds, which is better than the average production of cows in Canada, and indicates considerable improvement brought about by the methods pursued. Realizing that more milk could be produced by more intelligent feeding and breeding, states the supervisor, Mr. J. H. Tremblay, B.S.A., five operators have been induced to purchase pure-bred sires with dairy record qualifications. Other operators are expected to follow suit in the near future. In the production of the thirteen herds quoted there is the wide margin of over 4,000 pounds in the average per cow, the best average of a herd comprising eleven cows being 7,967 pounds and the lowest average of one consisting of 13 cows being 3,156 pounds. The highest producing cows in a herd of Holsteins was 11,049 lbs., in a herd of Ayrshires 9,259 lbs., and in a herd of grade Shorthorns 10,003 lbs. The best in a herd of grades standing at the bottom of the list is 3,891 lbs. It is hardly necessary to say that the keeping of these records is an incentive to both better feeding and better breeding.

## British Columbia Timbers

Exhibit Shown at Wembley Has Resulted in Large Orders From Britain

As a result of the British Columbia exhibit at Wembley, many prominent architects of the United Kingdom are availing themselves of the new and beautiful interior decorative schemes which are obtainable with the new well-known British Columbia timbers. Wembley has provided a means to place before the public in general, and architects and builders in particular, practical illustrations of the use and coloring of these timbers. In this regard it has played a most important part in the pronounced increase of British Columbia timber exports to the United Kingdom.

Canadian Butter Shipped To Orient

Large Quantities Are Shipped to China, Japan and the Philippines

Last year Canada shipped to Japan 538,000 pounds of butter, to China 259,000 lbs., Hong Kong 20,000 lbs., to the Philippines 188,000 lbs., and to the United Kingdom 767,870 lbs., all through the port of Vancouver. The majority of the shipments went from Alberta. Altogether some 2,000,000 lbs. of butter were exported through Vancouver last year.

## Is Far From Bankrupt

"The wildest nonsense," was the expression used by Right Hon. Sir Robert Horne, former chancellor of the exchequer in the British Government, in characterizing suggestions made recently by a British shipowner that Great Britain is heading for bankruptcy and ruin.

## Brides Are Disappointed

Disappointed war brides are returning daily from America to their homes in France. It has been estimated that as many as 20 per cent. of the marriages between American soldiers and French girls have resulted in a failure.

## Dairy Cattle For China

The first shipment of pure-bred dairy cattle from British Columbia to Southern China left Vancouver recently, when thirty head of stock went forward to Shanghai.

## Unoccupied Lands In West Greatest Single Asset In Sight For Canada's Future Growth

### Prize Winning Butter

Settlers From Britain Meet With Success In Canada

In just over four months from the time of her first arrival in Canada, Mrs. W. N. Smith, who with her husband and six children came to Canada under the British family farm settlement scheme at the end of last May, has become a prize-winning butter, cheese and cream maker. At the fall fair recently held at Milner, British Columbia, Mrs. Smith won first prize for fresh butter, first for fancy butter, first for cream cheese and second for clotted cream.

Mrs. Smith made good butter and cheese on her husband's farm in the Old Country and shortly after she arrived at their new 40-acre farm at Port Langley, B.C., early last June, she began again to put her knowledge of making dairy products to practical use. A family of six children ranging in ages from 13 to four years, pronounced them excellent. Visitors registered a similar verdict. The field officer of the land settlement branch of the department of immigration and colonization advised Mrs. Smith to compete with her butter and other dairy products in the Milner fall fair. She did so with the results aforementioned.

Robert J. Alway, another British settler, who came to Canada last April, has recently won a first prize for a horse, first for a cow and two second prizes for cows at the Agassiz, B.C., fall fair.

Mr. Alway was a farmer near Bristol, England. He has a wife and two children, a girl of 17 years of age and a boy of 12 years. The boy may claim a share in the honor of winning the prizes for it was he who prepared the animals for the show.

### Mining In British Columbia

All Records For Mineral Production Will Be Eclipsed In 1925

All yearly records for mineral production both from the standpoint of quantity and value, will be eclipsed in 1925, according to a summary of mining operations for the first eight months of the present year, issued by the B.C. minister of mines. It is estimated that the monetary value of the mineral production for the first eight months of 1925 is approximately \$41,000,000. This indicates that the total annual production for the year 1925 will approximate at least \$60,000,000, an increase of \$17,295,326, or 23.10 per cent. over the total for 1924, hitherto a record for the province.

Quite aside from the figures for the acreage which have been surveyed and disposed of in different forms, rough estimates, the best that can be made with present information, indicate that there is a total of about 167,000,000 acres of land in the three prairie provinces physically suitable for grazing or for agriculture. The area at present occupied as farm lands is rather less than 90,000,000 acres. Allowing liberally for the acreage now being used for grazing purposes, still leaves it amply evident that the west has a long road to travel before its agricultural areas are anything like fully developed. To cite only one more figure, it is worthy of notice that Dr. O. E. Baker, of the United States department of agriculture, recently estimated that Canada is potentially capable of producing a wheat crop exceeding 1,200 million bushels. Thus, viewing the western land situation by and large, it is fairly safe to say that the unoccupied lands of the prairie provinces are still the greatest single asset in sight for the Dominion's future growth.

## Shipping Wheat Via Vancouver

Shipments of wheat from Vancouver during the first two months ended September 30, 1925, were 1,457,904 bushels, and receipts \$93,330. For the whole of last year approximately 25,000,000 bushels of wheat passed through this port, and it is anticipated that the wheat movement through Vancouver this year will equal, if not exceed, that of 1924.

### France Honors Canadian Ace

Major W. E. Sussan, Ottawa, Ontario, in command of the Sherifenne Escadrille, 27th Regiment of Aviators, French Air Forces in the Moroccan war, has been awarded a Colonial Cross and received creditable mention in dispatches for the gallant services of the Canadian ace in fighting the Rifians.

About 1,000,000 tickets for free medical treatment have been issued by the Tokyo, Japan, municipality in the last six months.

### The natural resources intelligence

service of the department of the Interior at Ottawa says: An area slightly less than two hundred million acres lies within the surveyed tract of the three prairie provinces. What has been done with this vast territory? Twenty-five years ago Canada was calling from the houseboats that free homesteads were available to all. The call for settlers produced amazing results. Today, there are nearly ninety million acres of the land in the three provinces occupied as farm land. Undoubtedly the best of the land open for homesteading has been taken up. No less than 72,131,000 acres have been granted to settlers and others to the form of homesteads, land sales, bounty grants, half-breed scrip, etc. Grants to railways and to the Hudson's Bay Company have absorbed 38,432,000 acres of the surveyed area, while 27,422,000 acres have been set aside for forestry purposes, Indian reserves, school lands, parks, grazing leases, water-covered land, and road allowances account for 25,951,000 acres, leaving a total of 26,967,000 acres not allocated at the commencement of the present year.

Studded solely with no eye to the surveyed lands still held by the crown, the western land situation might not look very promising for further large settlement. There are, however, two other important factors to take into account.

First, the surveyed area can and, in time, will be, somewhat enlarged when the railway network is extended into areas which are still too remote to warrant surveys, let alone settlement.

Secondly, there are the privately-owned unoccupied lands within the present surveyed areas—that is, the lands held for sale by individuals and by the railways and the Hudson's Bay Company. It is estimated that there are about 18,000,000 acres of such lands. When it is borne in mind that these are largely select lands, whereas the surveyed lands still held by the public are the "marginal" lands in every sense, one can realize how closely the future progress of western settlement is tied up not only to public policies with respect to crown lands but to the marketing and occupation of privately-owned lands. Public

lands no longer dominate the situation with respect to western settlement.

Quite aside from the figures for the acreage which have been surveyed and disposed of in different forms, rough estimates, the best that can be made with present information, indicate that there is a total of about 167,000,000 acres of land in the three prairie provinces physically suitable for grazing or for agriculture. The area at present occupied as farm lands is rather less than 90,000,000 acres. Allowing liberally for the acreage now being used for grazing purposes, still leaves it amply evident that the west has a long road to travel before its agricultural areas are anything like fully developed. To cite only one more figure, it is worthy of notice that Dr. O. E. Baker, of the United States department of agriculture, recently estimated that Canada is potentially capable of producing a wheat crop exceeding 1,200 million bushels. Thus, viewing the western land situation by and large, it is fairly safe to say that the unoccupied lands of the prairie provinces are still the greatest single asset in sight for the Dominion's future growth.

### Recognizes Voice Over Radio

The strange experience of recognizing a voice 3,000 miles distant after not having heard it for 12 years is a record for radio amateurs. When Leo Dryden, the variety singer, broadcast songs from Newcastle-on-Tyne recently, his son in New York recognized the voice while listening. Wheeler Dryden and his father have not met for 12 years.

### Plea For Plain English

Speaking before the British Association for the Advancement of Science at Southampton, England, Sir Oliver Lodge asked that scientists talk in plain English. A particular appeal was made to botanists, who were declared to be the most prolific culprits of troublesome words.

### New B.C. Fox Farm

Portland Island, near Moresby Island, B.C., has been bought by T. E. Westerton, of Shanghai, for the purpose of converting it into a fox farm. The island is approximately five hundred acres in area and it is Mr. Westerton's intention of stocking it with blue and silver foxes.

Mitsaka, Japan will convert it into a naval museum.

Instead of scrapping the warship

## ENGLISH BEAUTIES INVADE CANADA

J. W. Jackson's "Twelve English Dancers," who recently performed before their Majesties, the King and Queen, at the Alhambra Theatre, London, arrived in Canada on the Canadian Pacific liner, Minnedosa, for a thirty weeks' tour of Canada and the United States, opening at Montreal, October 19.

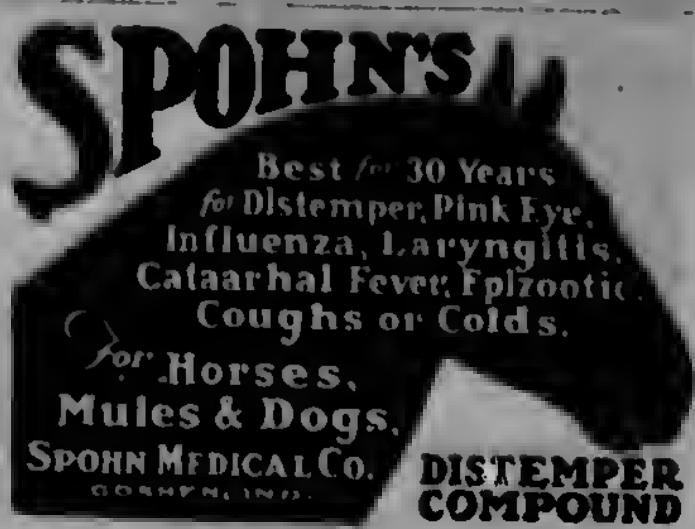

English choruses have scored singular successes in their appearances on this side of the water, and last year the most popular musical show in New York was C. B. Cochran's London production, "Charlie's Revue." This dazzling dozen evidently anticipate a similar conquest.

**Monument To Skill  
Of British Engineers**

Great Dam In Egypt Irrigates Over 30,000 Acres Of Desert  
Monuments to the skill of British engineers and contractors are spread over the four quarters of the globe. The latest, and one of the greatest—the Mankwar dam, on the Blue Nile, 250 miles south of Khartoum, Egypt—will be officially opened by one of King George's sons in January next. The dam, the construction of which involved the expenditure of several million pounds, is already fulfilling its allotted task for the contractor—Lord Cowdray's firm, who were under a penalty of \$500,000 a day if water was not flowing over the desert by July last. The construction of the dam was under the direction of one of the partners, Sir F. T. Hopkins, an engineer of great experience. Over 20,000 men were employed on the work, which could only be carried on for seven months each year—from November to July, for during the other five months the Blue Nile is in flood. The dam is two miles long, and creates a lake 50 miles long, two miles wide and 56 feet deep. From it runs a canal and nearly 10,000 miles of waterways, which irrigate over 30,000 acres of desert. Cotton fields now flourish where a few months ago there was nothing but waterless desert, and as a result of the building of the dam, the output of the Egyptian cotton is greatly increased.

**BARRE, SON OF KAZAN**  
by James Oliver Curwood  
A LOVE EPIC OF THE FAR NORTH  
Copyright, 1917, by Doubleday, Page & Co.  
"BARRE, SON OF KAZAN," a Vitaphone Picture, With Wolf, the War Dog. Is an Adaptation of This Story

**SYNOPSIS**  
Nepesee, daughter of Pierrot, the trapper, took Barre, the wolf-dog, into the woods and the two spent the night there. Barre was still untamed, but the girl was determined to make a pet of him. Nepesee was quarter-Indian, with French blood also in her veins. In a few days she would be seventeen years old and her father had brought her ribbons for her hair, red shoes and material for a new dress. McDonald, the government map-maker, arriving, took photographs of the girl in her birthday finery.

will help draw you down on the first good snow."  
The Willow was tying a knot in Barre's babiche, and she rose slowly to her feet and looked at Pierrot. Her eyes were big and dark and steady. "I am not going, mon pere!"

"Her eyes were big and dark and steady. 'I am not going, mon pere!'"

**CHAPTER XVI.—Continued**  
It was late in August when Barre saw the first of his kind outside of Kazan and Gray Wolf. During the summer Pierrot allowed his dogs to run at large on a small island in the centre of a lake two or three miles away, and twice a week he netted fish for them. On one of these trips Nepesee accompanied him and took Barre with her. Pierrot carried his long carbon gut whip. He expected a fight. But there was none. Barre joined the pack in their rush for fish, and ate with them. This pleased Pierrot more than ever.  
"He will make a great sledge-dog," he chuckled. "It is best to leave him for a week with the pack, ma Nepesee."  
Reluctantly Nepesee gave her consent. While the dogs were still at their fish, they started homeward. Their canoe had stolen well out before Barre discovered the trick they had played on him. Instantly he leaped into the water and swam after them—and the Willow helped him into the

With a shrug of his shoulders Pierrot watched her. After all, was he not glad? Would his heart not have turned sick if she had been happy at the thought of leaving him?  
"The Saints be blessed!" he murmured. "Now—now, it is Pierrot Du Quesne who knows what to do!"

Early in September a passing Indian brought Pierrot word from Hush McTaggart. The Factor had been very sick. He had almost died from the blood-poison, but he was well now. With the first exhilarating tang of autumn in the air a new dread oppressed Pierrot. But at present he said nothing of what was in his mind to Nepesee. The Willow had almost forgotten the Factor from Lac Bain, for the glory and thrill of wilderness autumn was in her blood. She went on long trips with Pierrot, helping him to blaze out the new trap lines that would be used when the first snows came, and on these journeys she was always accompanied by Barre.  
"By midwinter I will have him the finest dog in the pack, mon pere!"  
This was the time for Pierrot to say what was in his mind. He smiled.  
"I am going to send you down to the school at Nelson House again this winter, ma cherie," he said. "Barre

**CHAPTER XVII.**  
Back to Lac Bain, late in September, came MacDonald, the map-maker. For ten days Gregson, the investigating agent, had been Hush McTaggart's guest at the post, and twice in that time it had come into Marie's mind to creep upon him while he slept and kill him. The Factor himself paid little attention to her now, a fact which would have made her happy if it had not been for Gregson. He was enraptured with the wild, elusive beauty of the Cree girl, and McTaggart, without jealousy, encouraged him. He was tired of Marie.  
McTaggart told Gregson this. He wanted to get rid of her, and if he—Gregson—could possibly take her on with him it would be a great favor. He explained why. A little later, when the deep snows came, he was going to bring the daughter of Pierrot Du Quesne to the Post. In the remoteness of their brotherhood he told of his visit, of the manner of his reception, and of the incident at the chasm. In spite of all this, he assured Gregson, Pierrot's girl would soon be at Lac Bain.  
It was at this time that MacDonald came. He remained only one night, and without knowing that he was adding fuel to a fire already dangerously blazing, he gave the photograph he had taken of Nepesee to the Factor. It was a splendid picture.  
"If you can get it down to that girl some day I'll be mightily obliged," he said to McTaggart. "I promised her one. Her father's name is Du Quesne—Pierrot Du Quesne. You probably know them. And the girl—"  
The next day MacDonald started for Norway House. McTaggart did not show Gregson the picture. He kept it to himself, and at night, under the glow of his lamp, he looked at it with thoughts that filled him with a growing resolution. There was but one way. The scheme had been in his mind for weeks—and the picture determined him. He dared not whisper his secret even to Gregson. But it was the zone way. It would give him Nepesee. Only—he must wait for the deep snows, the mid-winter snows. They buried their tragedies deepest.  
McTaggart was glad when Gregson followed the map-maker to Norway House. Out of courtesy he accompanied him a day's journey on his way. When he returned to the Post, Marie was gone. He was glad. He sent off a runner with a load of presents for her people, and the message: "Don't beat her. Keep her. She is free."

**NERVES AND  
FAINTING SPELLS**

Sent Woman to Bed. Great Change After Taking Lydia E. Pinkham's Vegetable Compound

Sarnia, Ontario. "After my girlie was born I was a wreck. My nerves were too terrible for words and I simply could not stand or walk without pains. I suffered with fainting spells until I was no longer any good for my household duties and had to take to my bed. The doctor said I should have an operation, but I was not in a fit condition at that time. My neighbor said, 'Why don't you try Lydia E. Pinkham's Vegetable Compound?' I am sure it will do you good and will give those doctor's bills. So I was advised by my husband to try it after I told him about it. I am very thankful to say that I was soon able to take a few boarders for a while as rooms were scarce at that time. My baby is 17 months old now and I have not yet had an operation, thanks to your medicine. I have recommended the Vegetable Compound to a few people I know and have told them the good it has done me. I know I feel and look a different woman these last few months and I certainly would not be without a bottle of your medicine in the house. You can use this letter as you see fit, as I should be only too glad for those suffering as I have to know what it has done for me."—Mrs. ROBERT G. MACGREGOR, R. R. No. 2, Sarnia, Ontario.  
A recent canvass of women users of the Vegetable Compound report 98 out of 100 received beneficial results. This is a remarkable proof of its merit. C

**NERVES AND FAINTING SPELLS**  
Sent Woman to Bed. Great Change After Taking Lydia E. Pinkham's Vegetable Compound  
Sarnia, Ontario. "After my girlie was born I was a wreck. My nerves were too terrible for words and I simply could not stand or walk without pains. A recent canvass of women users of the Vegetable Compound report 98 out of 100 received beneficial results. This is a remarkable proof of its merit. C

Along with the bustle and stir of the beginning of the trapping season, McTaggart began to prepare his home for the coming of Nepesee. He knew what she liked in the way of cleanliness and a few other things. He had the log walls painted white with the lead and oil that were intended for his York boats. Certain partitions were torn down, and new ones were built; the Indian wife of his chief runner made curtains for the windows, and he confiscated a small photograph that should have gone on to Lac la Biche. He had no doubts, and he counted the days as they passed.  
Down on the Gray Loon, Pierrot and Nepesee were busy at many things, so busy that at times Pierrot's fears of the Factor at Lac Bain were forgotten, and they went out on the Willow's mind entirely. It was the Red Moon, and it thrilled with the anticipation and excitement of the winter hunt. Nepesee carefully dipped a hundred traps in boiling carbon-bait mixed with heaver-grease, while Pierrot made fresh dead-falls ready for setting on his trails. When he was gone more than a day from the cabin, she was always with him.  
It was the Willow's voice which Barre had learned to understand, and the movement of her lips, her gesture, the pulse of her body, the changing moods which brought shadow or sunlight into her face. He knew what it meant when she smiled; he shook himself, and often jumped about her in sympathetic rejoicing, when she laughed; her happiness was a part of him, a stern word from her was worse than a blow. Twice Pierrot had struck him, and twice Barre had sprung back and faced him with bared fangs and an angry snarl, the crest along his back standing up like a brush. Had one of the other dogs done this, Pierrot would have half killed him. It would have been mutilating, and the man must be master. But Barre was always safe. A touch of the Willow's hand, a word from her lips, and the crest slowly settled and the snarl went out of his throat.  
Pierrot was not at all displeased. "Dear! I will never go so far as to try and whip him out of him," he told himself. "He is a barbarian—a wild beast—and her slave. For her he would kill!"  
So it came, through Pierrot himself—and without telling his reason for it—that Barre did not become a sledge-dog. He was allowed his freedom, and was never tied, like the others. Nepesee was glad, but did not guess the thought that was in Pierrot's mind. To himself Pierrot chuckled. She would never know why he kept Barre always conspicuous of him, even to the point of hating him. It required considerable skill and cunning on his part. With himself he reasoned:  
"If I make him hate me, he will hate all men. May-oo! That is good."  
So he looked into the future—for Nepesee.  
(To be continued)

**BABY'S OWN TABLETS**  
AN EXCELLENT REMEDY  
For Any of the Many Minor Ailments of Infants and Young Children  
No mother can expect that her child will escape all the ills to which babyhood and childhood are subject, but she can do much to lessen their severity, and to make baby's battles for health easily won.  
Nine-tenths of the minor ailments which afflict babyhood and childhood are caused by some derangement of the stomach and bowels. Regulate the stomach and bowels and these troubles will disappear. To do this nothing can equal Baby's Own Tablets. They are a mild, but thorough laxative which through their action on the stomach and bowels never fail to banish constipation and indigestion; colds and simple fevers; expel worms and make the dreaded teething time easy.  
Concerning Baby's Own Tablets Mrs. A. Koshan, Hamilton, Ont., writes:—"Kindly send me your booklet, 'Care of Baby in Health and Sickness.' I have two little children four and a half and three years old and have used nothing else for them but Baby's Own Tablets. I think the Tablets are a wonderful medicine for little ones."  
Baby's Own Tablets are sold by all medicine dealers or will be sent by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

**Man's Color Depends On Salt**  
Scientist Tells Why Races Are White, Yellow, Brown and Black  
An eminent scientist, speaking of the significance of common salt, states that one's color is dependent upon salt. If your ancestors ate much salt, the chances are that your complexion is fair. In Northern Europe, for example, where there has always been an unlimited supply of salt, the inhabitants are white. In China, Greenland, Korea and India, where salt is obtainable, but expensive, the color is yellow. On the plains of America and the Malay Peninsula, where the lack of good transportation makes salt difficult to get, man is brown. And finally, in West and Central Africa, in many sections in which is actually unknown, man is black.

**Pastimes Of Wise Men**  
Skipping Pebbles Has Fascination For Famous Writers  
Though playing ducks and drakes on the seashore can hardly be deemed an intellectual pastime, it seems to have a peculiar fascination for men of letters. A friend who spent a week with Alfred de Musset on the Brittany coast complained that the poet spent almost the whole time trying to make pebbles skip across the waves, and Mr. Lewis Lind tells of a whole afternoon which he and Joseph Conrad and H. G. Wells spent on the beach at Sandgate engrossed in the same pursuit.

**The Swiftest Elevators**  
The swiftest lifts or elevators in the world are said to be at the Savoy Hotel, London. There are three in the "check room" which speed at the rate of nearly 70 miles an hour. When a button is pressed, the lifts, with their cargo of hats and coats, are shot like a rocket to a room 100 feet above in a little more than one and one-half seconds.  
The largest silver nugget ever mined in British Columbia weighs 36 ounces.

**DODD'S KIDNEY PILLS**  
FOR ALL KIDNEY DISEASES  
RHEUMATISM, GRAVEL, BRIGHT'S DISEASE, DIABETES, BACKACHE  
TRADE MARK  
R 23 THE PHARMACEUTICAL CO.

**Prince Of Wales Must Study**

Should Consider Seriously His Life's Work Says King George  
His Majesty says the Prince of Wales must go back to school on his return from his South American tour. The King has decided the time has come for the Prince to study seriously the work he will have to do when he takes the throne. With this thought in mind, the King has prepared a very definite course of instruction for the Prince. The Prince's education at Oxford was interrupted by the war and his travels abroad, on diplomatic missions, have not permitted him to do a great deal of studying. It is admitted that at times he shows his education is not all that is befitting one destined to succeed to the British throne. Economics, civil government, history and legal procedure are subjects in the curriculum the King has laid down for the Prince.

**All In Knowing How**

Finland Waitress Readily Understood Order of Canadian Nurse  
One of Canada's representatives to the recent international Conference of Nurses at Helsingfors, Finland, tells

**Transforming the Province**

Millions of Seedlings and Cuttings of Trees Sent Out From Indian Head  
During the past shipping season, which extended from April 14th to May 1st, 2,470,000 seedlings, cuttings and transplants were sent out from Indian Head to 3,080 farmers and 2,500,000 were distributed from Sutherland to 3,010 farmers. To date approximately 81,000,000 seedlings and cuttings of broadleaf trees and nearly 1,500,000 young spruce and pine transplants have been distributed.

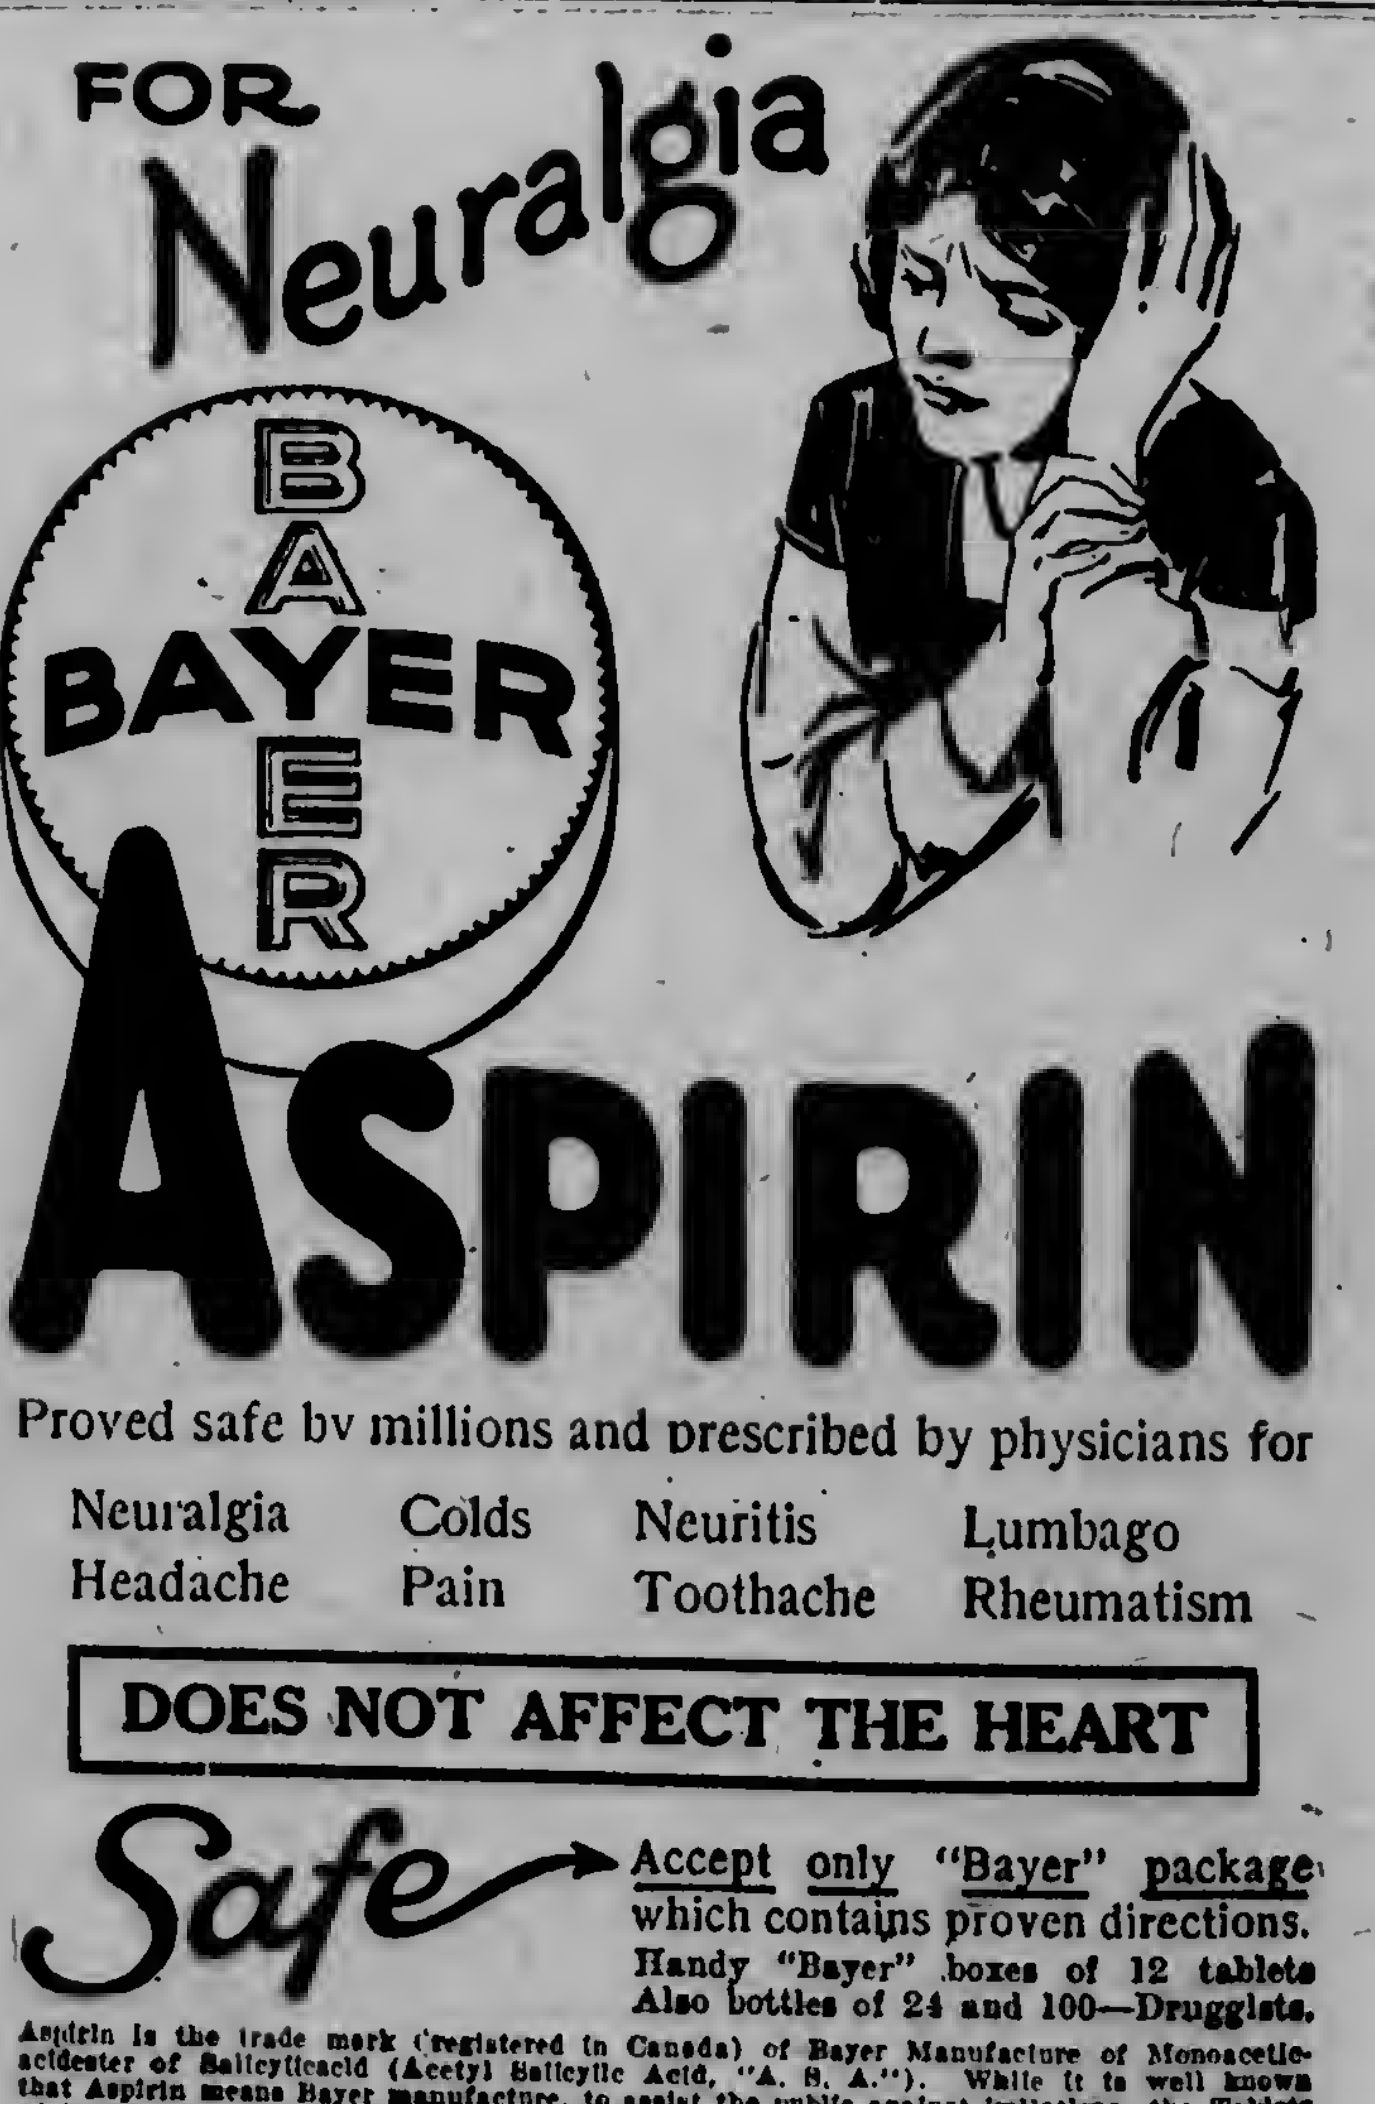

**She Couldn't Sleep  
Heart Was So Bad**

Mrs. J. D. McClintock, Charlotte-town, P.E.I., writes:—"About a year ago I was greatly troubled with my heart. I could not sleep at night, and was so nervous I imagined that I could see everything in the room moving, and would have to turn on the lights before I could get to sleep. After having read of your

I took several boxes of them, and can now get a full night's sleep without any trouble, and feel fine in every way."  
H. & N. Pills have been on the market for the past 32 years; all dealers sell them; put up only by The T. Milburn Co., Limited, Toronto, Ont.

**An Industrious Machine**  
The human heart as a machine is the most industrious part of the human body. It has been figured out on an average basis of 70 beats to the minute that the heart beats 4,000 times an hour, 100,000 a day, and more than 30,000,000 times a year.

**FOR Neuralgia**  
**BAYER**  
**ASPIRIN**  
Proved safe by millions and prescribed by physicians for  
Neuralgia Colds Neuritis Lumbago  
Headache Pain Toothache Rheumatism  
**DOES NOT AFFECT THE HEART**  
**Safe**  
Accept only "Bayer" package which contains proven directions. Handy "Bayer" boxes of 12 tablets. Also bottles of 24 and 100—Druggists.  
Aspirin is the trade mark (registered in Canada) of Bayer Manufacture of Monocetyl-salicylate of Salicylic Acid (Acetyl Salicylic Acid). While it is well known that Aspirin means Bayer manufacture, to assist the public against imitations, the Tablets of Bayer Company will be stamped with their general trade mark, the "Bayer Cross."

## Syrian Rebellion Growing And Damascus Now Is Completely Isolated

Paris.—Monsieur, a large French fortified camp, south of Saida, in the Djebel Druze territory of Syria, was evacuated, says an official announcement, owing to the regrouping of the French forces. The troops which had occupied Monsieff left the locality and the day was without incident.

The communiqué concluded with the statement that there are no other incidents to report in Syria, but information from reliable sources is that the Arabs have joined the Djebel tribesmen in open revolt against the French, and that Homs, about 80 miles north of Damascus, is completely isolated and closely besieged. Damascus residents are terrorized by desultory firing and the rebellion has assumed an aspect of open warfare.

A holy war, according to this information, is what the Arabs are preaching, and, fired with religious enthusiasm and an absolute scorn of death, their fight against the French as mandatory nation has taken on the nature of a crusade.

Unofficial information is that the Syrian rebellion is growing; that the insurgents have established provisional governments in the zones they occupy; that all of the Homs district is in the hands of the rebels and that Damascus is completely isolated from the outside world, the railroad and telegraph lines being cut.

In Damascus, street traffic is at a standstill, the shops are closed and the inhabitants are fleeing southward toward Jerusalem, and northward to Alexandretta Bay and Aleppo.

## Crime In United States

Craft is Blamed for Most of the Failures in Law Enforcement

Atlantic City, N.J.—More crime is committed each year to the United States than in the remainder of North America, and all of South America and Europe, exclusive of the Balkans and Russia, according to Chief Justice Marshall, of the Ohio supreme court. The justice was addressing the middle Atlantic district of criminal clubs, and he gave them his opinions that most executives are actually elected on a basis of non-enforcement of law. He blamed direct graft for most of the failures in law enforcement.

## Will Be Youngest Senator

Duke of Brabant is Only Twenty-four Years of Age

Brussels, Belgium.—There was induced into the Belgian senate when it reconvened November 10, one of the youngest, if not the youngest senator in the world. He is the Duke of Brabant, heir apparent to the Belgian throne, who was born in Brussels, November 3, 1901, and thus will be slightly over 21 years of age. The prince will occupy the seat once held by Leopold II, his grandfather, and Albert, his father, before they became kings of the Belgians.

Protest to League of Nations

Berlin.—The Syrian colony in Germany has filed a protest with the League of Nations against the barbarism and human slaughter in Syria "for which France as well as the League of Nations is responsible." The protest says the league has conferred upon France an "unnecessary and unjust mandate."

## France Will Take A Leading Place On The Disarmament Question

London.—Now that security is in a fair way for settlement by the Locarno pact, the French are taking the lead in preparations for a disarmament conference, which will be called at Geneva under the auspices of the League of Nations early next year. They are impelled in this course by two motives, the strongest of which is financial. The second motive is the growing revulsion of young Frenchmen against conscription. The French propose calling to the conference authorized by the league to discuss the following points:

1.—A study of all military, economic or other conditions by which the power for war of any country can be determined. This means the French are willing to place a control on all military forces of any state unconditionally under the league.

## Says Mining And Agriculture Linked

Deputy Minister of Mines Predicts Mineral Development in Canada

Winnipeg.—"Taking a long-sighted view and having regard to the ever-increasing mineral development with consequent exhaustion in time of the minerals of the older countries, it seems to me that nothing can stop Canada playing a prominent part in the future mineral production of the world," said Charles Cammell, J.L.D., P.R.S.C., federal deputy minister of mines.

Mr. Cammell was the principal speaker at the seventh annual western meeting of the Canadian Institute of Mining and Metallurgy.

Another point stressed by the deputy minister was that the development of the mining industry would inevitably lead to the thorough agricultural development of the country.

Dr. Cammell reviewed the mineral trade of Canada and declared the future would see the United States and the world in general looking to Canada's mineral deposits as the last great source of the world. The world's ever-increasing need of minerals to meet the demand and the gradual exhaustion of Old World sources of supply are factors driving toward the early opening up of Canada's unfathomed mineral deposits, Dr. Cammell declared.

## British Postal Staff Backs Marconi Men

Telegraph Operators Refuse to Act as Strike Breakers

London.—The unusual incident of a government department giving official support to a strike has occurred in connection with the trouble between about 150 wireless operators and the receiving clerks of the Marconi Company in London, Liverpool and Manchester. The strike has cut off Marconi wireless communication between the British Isles, the continent and countries across the Atlantic.

Several messages marked via Marconi were handed into the post office to be dispatched as telegrams. The post office staff protested against brooding the messages, taking the ground that it would be equivalent to acting as strike breakers, whereupon official instructions were given by the post office authorities that such messages should not be accepted for transmission during the strike.

Thornton Sails For England

Montreal.—Sir Henry Thornton, chairman and president of the Canadian National Railways, sailed from New York on the liner Manhattan for a brief visit to England. Sir Henry, while in London, will deal with matters pertaining to the European interests of the Canadian National system, an official statement made at company headquarters announced.

Ontario's Seaplanes Stage Manoeuvres

Sault Ste. Marie, Ont.—Sixteen seaplanes of the Ontario Air Service on Oct. 31, flew in formation over the city, giving a series of manoeuvres in the presence of a number of distinguished visitors, including Hon. James Lyons, minister of lands and forests, in whose department the air service is included.

## Canada's Prestige Abroad Increasing

Great Improvement Noted By President of Labor Congress

Ottawa.—"Canada's prestige is not only being maintained but it is being improved both in League of Nations circles and in the International Labor Office at Geneva, in connection with the league," said Tom Moore, president of the Trades and Labor Congress, on his return from a hurried trip to Geneva to attend the quarterly meeting of the governing body of the International Labor Office.

Apart from considerable activity in housing and railroad work, there does not seem to be any relief in the general unemployment situation in Britain, said the labor leader.

Mr. Moore said he found an active interest among Canadians abroad in the prospects of the general election here. His comment on Canadian news, or lack of it, in British newspapers, however, was that one might almost have been in a foreign country so far as Canada was concerned. The only items he saw were quite inconsequential and conveyed little information.

## Apple Production In Canada

Statistics Show Value of 1925 Crop on Farm is \$7,000,000

Ottawa.—In spite of the old adage, "an apple a day keeps the doctor away," Canada's per capita consumption of one of its most prolific products is only one-third of an apple a day.

This and other interesting things about the apple, its growth, cultivation and marketing were told to Ottawa Rotarians here by W. T. Macoun, Dominion horticulturist, who is also the official apple tester for the Dominion.

It may not be widely known among Canadians, he said, that the statistics for 1921 show that in Canada 1,775,366 apple trees were in cultivation, which, counting 60 trees to an acre, would cover an area of 136,500 acres. In 1925, the apple production was 12,200,000 bushels of apples of all varieties valued on the farm at \$7,000,000.

## To Make Medical Survey

Would Ensure a Constant Supply of Practitioners For Canada

Montreal.—Many prominent medical men from various parts of Canada attended the fall meeting of the executive committee of the Canadian Medical Association. The committee decided to make a medical survey of the entire Dominion with a view to ascertaining the distribution of the medical profession.

Coupled with this, was a decision to make a compilation of records of the annual supply of physicians through the universities. In order to ensure a constant and adequate number of practitioners for all Canada.

## Alaskan Volcanoes Active

Five Peaks Are Belching Great Clouds Of Smoke

Seattle, Wash.—The entire Alaskan coast, of the United States coastguard, reported here the greatest volcanic activity to the Alaskan peninsula and in the Aleutian Islands since Mount Katmai, on the peninsula 300 miles east from the Aleutians, erupted in 1912.

Five peaks, one of which is Katmai, are belching dense clouds of smoke which hang over the craters in mushroom-shaped haloes.

## University Students Fined

Toronto.—Eighty-one University of Toronto students have each been fined five dollars by the university authorities for participating in a raid on Trinity College residence during which several elegantly furnished college were driven from their beds by a stream of water from hose pipes.

## B.C. Pioneer Dead

Vancouver.—Stephen T. Hall, 79, a British Columbia pioneer who held the post of express agent and postmaster at 150 Mile House in the Cariboo district in the days of the gold rush, died here recently. He was born in Halifax. Mrs. A. C. Foster, of Glendale, Alta., is his daughter.

## Captured By Chinese Bandits

Peking.—Information that two American priests are held by bandits at St. John's Island, south of Hong Kong, has been received by the United States legation. It is understood that a United States destroyer and a Chinese ship are proceeding to the island.

## N. S. Coal Production

Gloucester, N. S.—Production at the collieries of the British Empire Steel Corporation reached almost half a million tons during the month of October, a total of 467,725 tons being raised as against 427,122 tons in September.

## Schooner Brought From Arctic By Eskimos

Crew Was Very Proficient and Experienced Proves Successful

Montreal.—Unique in the annals of Arctic navigation is the bringing down from Chesterfield Inlet, bordering on the 64th degree to Liverpool, N.S., a distance of nearly 3,000 miles, of a northern trading schooner manned by full blooded Eskimos. The schooner Jean Revillon, is a fur trading craft belonging to Revillon Freres, of Montreal. It was built in 1923 and since then has plied the Arctic waters north and west of Chesterfield Inlet.

To overhaul the vessel it was necessary to bring it to civilization to Shelburne, N.S. In charge of Captain W. H. Robertson, a Newfoundland, and with C. J. King, Montreal, as engineer, the vessel left on August 1 with a crew of four Eskimos.

Taking the Hudson Straits route, the schooner plodded its way through fierce gales. The whole journey was a perilous undertaking.

Only three weeks later, the Jean Revillon arrived at Liverpool, N.S., the captain, engineer and crew thankful that the voyage was nearly at an end. The crew is slated to have been very proficient, and the experiment proved successful.

It has never before been thought advisable to take Eskimos out of their own sphere, but this has proved that the feat can be done.

## Big Liner Battered By Waves

Gigantic Ship Encounters the Worst Storm of Its Career

Cherbourg, France.—Fifty or more passengers landed from the steamship Berengaria with bandaged heads, arms in splints or sprained legs. They had received these injuries on the voyage from New York in the most terrific storm, in the captain's estimation, the ship had ever encountered in her ocean career.

The seas ran mountain high. One terrific wave caused the ship to stand on end, and such passengers and members of the crew as happened to be on deck were thrown violently off their feet.

The commander of the Berengaria said that in all his 32 years at sea he never had seen weather equal to that culminating the tempest of Saturday.

## Not Building To Churchill

Says C.P.R. Has No Intention of Building Line to Hudson Bay

Winnipeg.—"The company has no intention of building a line to Fort Churchill on the Hudson Bay," declared D. C. Coleman, vice-president of the western lines of the Canadian Pacific Railway here, when advised of a report that the C.P.R. planned the construction of a branch through The Pas mineral belt.

A local paper carried the report from its Ottawa correspondent and it said the "ultimate destination of the line would be Fort Churchill."

"There was," said Mr. Coleman, "a survey made of a proposed Prince Albert to Herb Lake line, but construction is not contemplated at the present time." Herb Lake is a mining district of Northern Manitoba, near The Pas.

## Predict Potato Shortage

Unfavorable Weather Injures Crop of Tubers in Manitoba

Winnipeg.—Early frosts and generally unfavorable weather have brought havoc to the potato crop in Manitoba, and prices are hitting peak records. The retail price is now \$1.50 a bushel and it is possible that the \$2 mark will soon be reached.

Thousands of bushels of potatoes have been left in the ground, while earlier in the season heavy shipments were made to United States consumers in the Dakotas and today an acute shortage exists in this province. Importation will be necessary to fill the local requirements.

## France Trying Silver Fox Farming

Rouen, France.—Efforts to breed the silver fox in France are being pursued energetically. A course of lectures, with films illustrating the lives of captive foxes on Canadian farms, are to be given here. Trappers and fox breeders here from Canada declare the snow-covered pine forests of Northeastern France are ideal for raising the animals, and special preserves have been laid out.

## Prince Thrown In Fox Hunt

Lightning Buzzard, Bedfordshire, Eng.—The Prince of Wales has taken his first tumble from horseback since returning to England from his South African and South American journey. The fall came during an exciting fox hunt when the Prince's horse failed to take an awkward fence. The Prince was unhurt.

## Government Hangs On Against Will Of The People, Says Meighen

## Subsidy On Coal Rates Urged

Mining Institute Convention Discusses Western Coal Trade

Winnipeg.—The enactment and enforcement of an anti-dumping law against foreign coal, a subsidy on coal rates if no other way of freight reduction is found, and the withdrawal from entry and pooling of all Crown coal lands under a commission to prevent exploitation and wasteful opening-up of mines were among the remedies urged at the convention of the Canadian Institute of Mining and Metallurgy here.

"The Western Coal Trade" was the topic for discussion.

Trade Commissioner Howard Stutchbury, of Alberta, was among the speakers who strongly favored the anti-dumping. Mr. Stutchbury deplored the looseness of regulations which had allowed the opening up of several hundred mines of the "gopher hole" type.

There were 322 mines in Alberta in 1921, producing only a little more than five per cent. of the total output, while the remaining 77 had produced the other 95 per cent. Alberta, he said, is bottled up with abandoned mines of this type.

Mr. Stutchbury believes it would be in the best interests of economy and conservation if many of the mines were consolidated.

## Discuss Grain Act

Council of Agriculture Also Deals With Immigration Question

Winnipeg.—The Canadian Council of Agriculture in session here, discussed the Canada Grain Act as revised at the last session of the Federal Parliament. No recommendations of resolution on the subject were discussed.

The women's section presented a report to the meeting which was adopted. It contained the statement that a recommendation that trained psychiatrists examine intending immigrants in the country of their abode before they are passed for immigration, had been acted upon and

that a Canadian doctor, responsible to the Dominion department of health will be stationed in London for this purpose.

The government, it was reported, has agreed to an advance inspection of the homes into which intending immigrant children are to be placed, and that for the present no children under 14 years of age may be admitted.

## B.C. Cains By Seamen's Strike

Vancouver.—Strike of seamen in British ports has had the effect of diverting orders for approximately 20,000 tons of newsprint to British Columbia mills. This would not have been possible but for the Canadian-Australian Treaty which went into effect on October 1.

## Premier King Has Made A Decision To Meet Parliament

Ottawa.—It is officially announced that Premier King will meet parliament. The House of Commons will be called at the earliest possible date.

Premier King's statement reads: "After careful consideration of the constitutional precedents and their bearing upon the situation which has arisen as a result of the general election, the cabinet decided unanimously that it is their constitutional duty to meet parliament at the earliest possible moment, regard being had for the legal requirements with respect to the time necessary for the return of the writs and the official gazetting of members who have been elected."

"The latest official returns having made it apparent that as a result of the general election held on October 29, no one of the participating political parties will, of itself, have a clear majority in the House of Commons when parliament assembles, it became my duty as prime minister to request His Excellency the Governor-General with the situation and to advise His Excellency as to the course which should be pursued. After several interviews with His Excellency at which the position brought about by the recent general election was fully discussed and all alternatives presented, I have taken the responsibility of advising His Excellency to summon parliament for the earliest practicable date in order to ascertain the attitude of the parliamentary representatives towards the very important question raised by the numerical position of the respective political parties. His Excellency has been pleased to accept this advice."

"In the interval until parliament assembles, it is the intention of the government to refrain from making appointments beyond such as are essential for the proper carrying on of the public business."

"In the present situation, there are three possible courses of procedure, each of which has been carefully considered by the cabinet.

(1) That His Excellency be asked to grant an immediate dissolution of parliament.

(2) That His Excellency be asked to call upon the leader of the largest political group to form a government.

(3) That His Excellency be asked to summon parliament at the earliest practicable date for the purpose aforementioned.

"With respect to an immediate dissolution, it was felt that it was not in the interests of the country to occasion the turmoil and expense of another general election until at least parliament had been afforded an opportunity of giving expression to their views."

Ottawa.—Right Hon. Arthur Meighen, Conservative leader, in a statement issued, characterizes the announced intention of Premier King that the latter's government would continue in office and meet parliament, as "inspiration of power and contempt of the popular will."

Mr. Meighen's declaration reads as follows: "The premier's statement, stripped of its sophistry, is merely an announcement of his determination to hang on, in spite of a heavily adverse verdict from the people of Canada."

"The cabinet," he says, "considered the alternative of advising a second dissolution of parliament. The premier knows that his cabinet had no such alternative and could not get another dissolution no matter what they advised. They have made their appeal and have been defeated."

"Mr. King is now merely the leader of a minority group. There has never been a case in Canada, and none for a third of a century in Britain, where the leader of a minority group had waited for the calling of parliament or has refused to resign immediately the will of the people was known."

"Mr. Baldwin waited for parliament in 1923, but Mr. Baldwin emerged from the election the leader of by far the largest group. In Mr. Baldwin's case also, parliament already was being called to meet in three weeks. There was no time for a new government to be formed and ready to convene the house. Mr. Drury, in April, 1923, announced, and announced properly, that if another party were returned larger than his own in the then forthcoming elections, it would be his constitutional duty to resign in favor of the leader of that party."

"Mr. King declared as the reason for his appeal to the people, that his government could not satisfactorily conduct public business while dependent upon Progressive support. In defiance of this declaration he now decides to cling to office, though dependent infinitely more than he was before upon Progressive support."

"Of the 27 Progressives, Independent and Labor candidates elected, 18 of them damaged his record and defeated his candidates."

"The premier himself and eight of his ministers, have been rejected. The popular majority against his government is overwhelming."

"To cling to office under such circumstances is usurpation of power and contempt of the popular will."

## October Sets Cold Record

Ottawa.—The month just passed has been the coldest October recorded in the last 35 years at the Dominion experimental farm, and it may be tied it has been the coldest over a still greater number of years, as this is as far as the records at the farm run. The mean temperature for the month was 38.9 degrees Fahrenheit against the average of 46.6.

## Why Do The Tourists Come?

Tourists From the South Are Made to Feel at Home

During the past tourist season Canada was the holiday ground for many thousands of American tourists. They come from all portions of the southern republic, and they come in such numbers that the influx resembled the gathering for a great convention.

Why do they come? Because Canada has yet much of that which appeals to the real man or woman, natural scenery and natural beauty that have not been despoiled by the hand of industry, that have not lost their charm by the introduction of an artificiality depreciated by the lover of nature and the out-of-doors; Canada has restful and nerve-restoring conditions of life that enable one to return to duty with the vacation objective accomplished, namely, renewed energy and a feeling that one has gained something in education—for travel is education.

Why do they come again? This question has been answered times without number by our visitors. They come again because they are made to feel welcome—made to feel at home. This welcome was very clearly stated recently by Z. W. Cannon, manager of the Glaciers to Gulf Motorway Association, whose home is in San Antonio, Texas. "So you would like to know how Canada had treated me?" said Mr. Cannon. "Well I have never been treated better by any people of any state or nation. Within three minutes after crossing the international border they had no feeling just as much at home as though I were down in some Texas town." Great numbers of letters have been received by the natural resources intelligence service of the department of the interior from tourists who are not only satisfied but delighted with their visit to Canada, and have expressed in no uncertain terms their intention to again spend their vacation in this country.

Canadians are proverbially courteous, and this has been fully recognized by our visitors. Little wonder then that they will come again. While the words of the dear old song, "There is no place like home," are intensely true, the next best place is where one is made to feel at home, and Canadians have that faculty in large measure.

## Beginning Of Arctic Night

No Sunlight At Longyear City Until Next April

The Arctic night has settled over these desolate regions, and not a glimmer of sunlight will be seen again until the end of April.

This coming winter will be even more than usually quiet in Spitzbergen. Most of the coal mining settlements will be virtually deserted, for the low coal prices now ruling have made it imperative to restrict output, and from King's Bay alone 300 operatives were sent home by the last coal boats before the ice closed in, and only a score of watchmen will remain in charge.

At Green Harbor, the Dutch Company will have odd jobs for about 50 men, but only a dozen hardy Swedes will keep a lonely watch at the remote Swedish mine at Branganza Bay, which this year was inaccessible even in the middle of June.

The Great Northern Coal Company, the most important concern, will endeavor to carry on at Longyear City with 400 operatives, and a monthly output of 15,000 tons is expected. Conditions there are more favorable and the quality of the coal is superior.

The isolation of the smaller outposts is less complete since the advent of wireless.

## French-Canadian Settlers

L'Association Catholique Franco-Canadienne has completed arrangements to conduct an immigration campaign in the province of Quebec with the object of bringing new settlers to Saskatchewan. This organization, which has its headquarters at Prince Albert, Sask., is purely a provincial institution which has as its objective the betterment of conditions for French-Canadians in the Dominion.

## Grosvenor House To Be Sold

A modern apartment building is to rise shortly on Park Lane, London, where for generations only England's peers and wealthy subjects have had their palatial homes. The heirs of the late Lord Leverhulme will dispose of famous Grosvenor House to a company which will erect an apartment building. Lord Leverhulme planned to turn the famous ballroom into an art gallery.

A woman's idea of a personal devil is a neighboring woman who talks about her.

Joggs: "I had a fine time Sunday." Boggs: "Yes, I stayed home, too."

N. N. U. 1902

## Sees Lion Cubs Trained

East Indian Official Watched Method Employed By Lioness

According to a report in English papers, an East Indian official recently had an opportunity to watch a lioness train her cubs in the art of catching and killing prey.

It appears that while secreted in the bushes to leeward of an open space in the jungle where was tethered a goat as bait for lions, the official saw a lioness come marching along, followed by her five cubs.

When she spotted the unlucky goat the instruction began. The young lions carefully watched their mamma steal up, spring upon the victim and go through the motions of giving it the coup de grace. Then they faithfully imitated her actions, and after a few trials the goat's sufferings were over.

The lioness looked about for another object of demonstration and found it in a buffalo that came strolling that way. This time, however, the pupils did not have so easy a lesson. The buffalo, full of fight, defending himself so well against the attacks of the cubs that the instructress had to take a hand.

## Spiders Affected By Music

Observations Show Peculiar Instincts Possessed By These Insects

That spiders are affected by music is shown by the following incidents. An organist in a church noticed that a spider would swing down upon a single thread and rest above the keyboard every time a tune was played, and directly the music ceased it would disappear. Either very soft or very loud music would bring it down. During a concert at Leipzig, the leader of the orchestra, particularly noticed a spider which descended by the same means from a chandelier whilst a violin solo was being played, but directly the solo was finished it ran back quickly. With regard to other instincts possessed by these insects, some interesting experiments have been made to test their powers of vision and sense of color. It was found that when their prey, which consisted of small insects, remained motionless, they could see them at a distance of five inches, but when the insects were moving they could see them at a much greater distance. As for each other, a spider could sight another spider at least twelve inches away.

## Counting The Stars

Is A Hopeless Task

British Astronomers After Reaching 100,000,000 Mark Despair Of Finishing Job

The giant task of counting and definitely locating the stars in the heavens, which has taken 40 years to date and now tops the 100,000,000 mark, may be abandoned as a hopeless job. Of the many observatories which originally agreed to undertake the counting of the stars and the mapping of their positions in the heavens section by section, only the Greenwich and Oxford observatories have completed their task. But even their job is never—and probably never will be—really finished, for each new and larger telescope which comes into use reveals the existence of myriads of stars hitherto unrevealed. A chart is no sooner completed than it is put out of date by new discoveries.

Astronomers who have been at work on the charts for the last 40 years and have already listed, charted and catalogued more than 100,000,000 stars are beginning to wonder if there is any point in going ahead with it.

## Absolutely No Connection

Eye-Teeth and Eyes Are Served By Different Set of Nerves

Eye-teeth and eyes have absolutely no direct connection, the former only getting their name from the fact that they lie nearest the eyes. The eye-teeth and the eyes are served by entirely distinct sets of nerves, but from the nearness of the teeth nerves to the eye nerves, it may occasionally happen that inflammation or poisoning of the teeth nerves after an extraction, may affect their neighbors, the eye nerves, and so set up a temporary affection of the eyes. Such cases, however, occur very rarely, and are merely of passing duration. Where people assert that permanent eye trouble dated from the time their eye-teeth were extracted, the fact is that at the same age at which the teeth needed extraction, the eyes began to fail through the ordinary processes of nature.

## May Be Valuable Discovery

A process by which worn-out silk can be restored to its original state is reported to have been discovered by a young Japanese scientist who was recently graduated from the Ueda Sericulture School. The process still remains a secret, but it is believed to have great commercial possibilities.

## Railroads 100 Years Old

Difficult to Realize That Railways Were Unknown Less Than Four Generations Ago

It is scarcely possible for the contemporary world to realize that the steam railroad is only 100 years old. What with the fact ocean liners, the luxury trains speeding at the rate of sixty miles an hour, the electrified railroad and the steadily expanding routes of commercial aviation, the average traveler or man of affairs is prone to forget that the least marvelous of these facilities was unknown and undreamed of less than four generations ago.

Great Britain has just observed the one hundredth anniversary of the first steam railroad operated in that country or in the world. On September 27, 1825, the Stockton-Darlington Railroad Company gave the order for the first journey of the passenger train drawn by the Stephenson locomotive. That train, curiously enough, was preceded, according to quaint historical records, by a man on horseback holding a flag in his hands. The horseman was in no danger of being run down, for the speed of the train was only about five miles an hour. The engineer in charge was Stephenson himself.

A modest inscription on a marble monument at Stockton declares that the opening of the Stockton-Darlington railroad "marked an epoch in the history of mankind." That, in the view of the Chicago Daily News, published in the world's greatest railroad centre, is a sufficiently conservative statement. But it would require volumes to trace the effects of Stephenson's invention on government, industry and society.

It is an interesting fact that ten decades after the opening of the first railroad line, few persons appreciated the full economic significance of the new transportation system. Rubble railroad companies were organized, to be sure, almost immediately—and failed. There was little demand for freight cars, and only passengers were carried at first. There was, indeed, much opposition to the steam railroad. Experiments with steam-driven locomotives had continued through almost two generations, and the steam railroad had succeeded in establishing itself when the electric telegraph underwent its initial trials. Eventually these two great inventions jointly created the modern world market. The centenary of the steam railroad finds the world engaged in solving new transportation problems—

the electric railroad, extension of the electric railroad and the conquest of the air.—Ex.

## Nautically Speaking

Club Member Was Not Going To Have Story Spoiled

He had just returned from a perilous sea voyage, and, comfortably seated in the club's best armchair, was relating to a host of admiring friends some of the privations endured on the journey.

"Then," he said, "I went down to the cabin for a little lunch."

"But," protested a listener, "you have just said there was nothing left to eat on the whole ship. What did you have for lunch?"

"Oh, it was quite a trifling affair, you know. Beef, wine and an egg."

"Well, where did the beef come from?" queried a listener.

"From the bulwarks, of course," was the retort.

"Where did you get the wine?"

"From the portbottle."

At this a laugh echoed through the room, but still someone asked:

"But what about the egg? Where did you make that up?"

"Oh, that was simplest of all," smiled the boaster. "The captain ordered the ship to lay to, and he gave me one!"

## Wieringen Is No Longer An Island

Now Forms Part Of Great Zuiderzee Drainage Scheme

Wieringen, which achieved worldwide notoriety through the place of exile of the German ex-Crown Prince William, is an island no more.

It now forms part of the great Zuiderzee drainage scheme. A newly laid dam 1½ miles in length now unites Wieringen with the mainland. This is, however, only a small beginning. It may take Holland 30 years before realizing her ambition to add 1,000 square miles to her territory by reclaiming the Zuiderzee, a project estimated to cost \$110,000,000.

Machines can turn out 400 finished cigarettes a minute, or 190,000 in an ordinary working day.

Average factory wage of New York state is \$1.705 a year, compared to \$597 a year in 1914.

The kite has an eye for color, and usually adorns its nest with as bright pieces of cloth as it can find.

## Loathing For War

Rising Disgust of Humanity of Everything That Pertains to War

As war grows older it almost seems as if it were meeting the rising disgust of humanity half-way by increasing the repulsiveness of its own details, physical and moral. The Great War, with its all-round employment of weapons of a peculiar baseness, such as poison gas and venomous lying, was not only the greatest but the most dishonorable war of civilized times; and, on the physical side, the submarine, the aeroplane, and the tank have much increased, between them, the provision of such torments as slow suffocation and roasting alive, to be added to mere abridgment of the patient's existence. It is unlikely that the erection of these novel torture-chambers will put any appreciable check on the number of persons willing to serve in future wars, for it is not the way of human nature to determine the question of combatancy or non-combatancy by reference to the particular quality of possible wounds.

But change for the worse in the character of warfare may reasonably weigh for something in the minds of those politicians by whom most wars are made and prolonged, and of those civilians who profit personally by their occurrence. If they cannot rise to this height of altruism they may yet be lifted to it by another probable tendency of the evolution of war—a tendency to leave an enemy's soldiers and sailors alone, as not worth poisoning or burning, and to burn or poison his most eminent politicians and heads of Big Business instead. For there is always that growing possibility that any future war may be waged against civilians rather than soldiers. There is even the possibility that human loathing for war may reach its full intensity in time to preclude even this choice between targets.—Manchester Guardian.

## Interesting Book

In British Museum

Contains Portions Of New Testament Which Were Rejected

There is a rare book, entitled "The Forbidden Book," in the library of the British Museum. It is not an unpleasant volume. It is simply a book containing all those portions of the New Testament which the pious fathers of the church rejected as doubtful. This happened at the time of the famous council of Nicea, which gave us

the Nicene Creed. Remarkable old legends concerning the boyhood of Our Lord are told in one part of "The Forbidden Book." It is related, for example, how He used to make clay birds in his boyhood and endow them with life so that they flew away. There is also a Gospel of Nicodemus, which is very interesting. In short, the book is to the New Testament what the Apocrypha is to the Old Testament. For many years the volume has been out of print, and the only place to see it is in such great libraries as the British Museum, the Bodleian at Oxford, the London Library and similar institutions.

## More Ancient Than History

Factory In England Built Before Records Were Kept

An old encampment, so old that history has no record of when it was built, has just been presented to the British nation.

This is Clisbury Ring, near Worthing, high upon the South Downs, within sight of both the Isles of Wight and Beachy Head.

The camp covers 80 acres, but its greatest interest is not in its fortified earthworks, the finest in the district, but as a factory for flint instruments established by Stone Age man. The factory consists of two shafts sunk to the level of the flint rock, and joined by a tunnel. Quantities of arrow heads and a number of tools have been found in these shafts.

## One Tree Yields 14,000 Apples

Edwin Reynolds, a farmer of Constantine, near Falmouth, Cornwall, England, has a tree on his place which this year according to his account, yielded 14,000 apples. The crop weighed one ton and a third. The tree, which is about 70 years old, stands 30 feet in height. The yield in 1921 was 16,000 apples. The apples are small and only good for cooking.

## Ban On Motor Cars

There is a part of the British Empire not 100 miles from the south coast of England, where motor cars are practically unknown, and certainly not wanted. It is Sark, the smallest of the Channel Islands, and the authorities have made a law forbidding any motor car to run over their roads.

Magistrate: "Are you trying to show contempt for this court?"

Witness: "No, I'm trying to conceal it."

## Brain Cannot Be Damaged By Study

Impossible To Use It To Full Capacity Says Noted British Surgeon

The energy contained in one ounce of sugar would be enough to produce any of Shakespeare's plays if it found its way to a brain gifted as was his, said Sir Arthur Keith, a noted British surgeon, and one of the greatest living authorities on the origin of man, in the course of an address in London on student habits.

Referring to the difficulty of the modern student in welding his needs with our present-day life, "We cannot not be students for many years before the most natural of all human appetites begins to give us concern," he continued. "Among the prerogatives of life we count the enjoyment of food. We are not quite certain what our brain cells live in, but we do know they need very little to do the heaviest work we throw upon them."

"You may study to the utmost limit of your endurance and by the mere act of study you may rest assured you will do your brain no injury. By habitual study you may overtax your physical endurance and you may damage your bodies if you neglect exercise, without a doubt, but you certainly will not damage your brain."

"You will never succeed in using the brain up to its full capacity. Our brains have moods and tempers, like horses or engines of motor cars—they have to warm up before they run smoothly and easily. When the brain starts sluggishly the healing power of a debauch of fiction is often marvelous in its results. All our organs are built for emergencies at critical junctures. The heart can rise to ten times its normal output. So in the same way can the brain. It is upon this emergency ration that the modern scholar has to depend."

Sir Arthur said men who lived six or eight thousand years ago were well equipped as far as the size and form of brain is concerned as we are today. "The young men of Babylonia and Egypt were acquiring the student habit while our British forebears, although rich in the knowledge of life, were, in the full meaning of the term, illiterate," he continued. "But the people of Western Europe now produce the highest form of students the world has. Learning thrives in Western Europe just because it has fallen on strong virgin soil. We have still in us the virility and energy which are inherent in men and women bred to a life in the open air."

"It is because you and I have the

aptitudes and instincts of our primitive forefathers so strong within us that we find it needs an effort—an internal struggle—to settle ourselves to our books of an evening. Our difficulties are even greater when the sun shines and the longing for the open country stirs the blood," Sir Arthur concluded.

## Waiting For New "Sovereign"

Owner of Lundy Island Would Enjoy Unusual Independence

Lundy, the lonely island in the Bristol Channel, 23 miles west of Ilfracombe, is waiting for a new "King."

An independence far exceeding that of some of the minor foreign potentates can be enjoyed by the man who purchases these 1,047 acres of romantic and historic property. The exceptional rights, privileges, and immunities mentioned in the catalogue of sale include freedom from Imperial taxation and municipal rating.

The owner of this island, which is two and one-half miles long and about a mile wide, and has a population of between 40 and 50 people becomes the "ruler" of a capital manor house and a granite built residence which is now used as a hotel.

He is entitled to demand landing fees from the general public and collect rent from the postmaster-general, the admiralty, the board of trade and Trinity House for cable testing buoys, war signal station, telegraph station and right of way.

## Took Prize For Long Service

Results of a competition in London for long service among domestics in any one family revealed the fact that Miss Elizabeth Butler had been employed in the household of the Duke of Portland for more than fifty-six years. Miss Butler was awarded first prize. All the other winners of prizes or of honorable mention had been forty-seven years' service in the same family.

## Ancient Ammunition

In the Middle Ages various missiles were shot from cannon. Bombs are mentioned in 1413, and in 1478 Henry V. ordered his clerk of the ordnance to get 7,000 stone shot made at the quarries at Maidstone. Since then chain, grape and canister have been invented as well as shells.

Don't marry for money. Yet if a girl has money there is no harm in trying to love her.

## Good Farming Demonstrated

Working To Assist the Farmer In Every Branch of Agriculture

An especially useful and practical division of the Dominion experimental farms is that of the illustration stations of which last year there were no fewer than 145 in operation. Eight are located in Prince Edward Island, 13 in Nova Scotia, 17 in New Brunswick, 38 in Quebec, 8 in Ontario, 8 in Manitoba, 23 in Saskatchewan, 16 in Alberta and 14 in British Columbia. Where possible superintendents of experimental farms and stations have charge of the work and in other places supervisors are appointed, all practical, competent and experienced men. The idea of the illustration stations is by actual demonstrations and guidance to aid the farmer in every branch of agriculture and to take direct to him what experiments, research and experience have taught. For this purpose, the illustration stations are located on privately owned farms, best situated to allow the farmers in the district to observe and note what is going on. New or improved varieties are introduced and any surplus seed is sold to adjoining farmers. Last year in this manner Mr. J. Fixter, chief of the division, in his report, just published, states that 20,943 bushels of seed grain, 2,636 bushels of seed potatoes and 3,359 pounds of grass and clover seed were disposed of.

## World's Oldest Man Works

Has Joined Staff of Imperial Guards In Constantinople

The world's oldest inhabitant is Zaro Agha. He is 150, and has documents to prove it, but, despite the fact that he is well in the running for his second century, he has gleefully accepted an offer from the Constantinople authorities to join the staff of guards at one of the imperial palaces. Zaro Agha would be still hale and hearty but for the fact that his great amount of traveling in recent years has proved too exhausting. On his return from Italy recently he had to call in a doctor, who ordered him rest and treatment in hospital for two months before he takes up his new post. Zaro was annoyed over the doctor's decision, declaring that there would be nothing the matter with him if he had not been obliged to eat so much macaroni while in Italy. Zaro Agha has been married 11 times, and is devoted to his present wife, who is only 27. The only member of the

family who gives him any trouble is a son aged 93, who thinks he is too old to earn a livelihood. "I don't see why I should have to keep him," declared the father, indignantly. "If I can work, surely the boy can, too!"

## A Rude Awakening

Prince, Had to Eat Detested Oatmeal While Training For Navy

The Prince of Wales did not like porridge any better than thousands of other children who make wry faces over their oatmeal in spite of all the Scotch manufacturers can do to popularize it in the British Isles.

In an address before the Industrial Welfare Society, Mrs. M. A. Cloudeley Brereton told an anecdote of the Prince's youth. On his last morning at home before he was to go into the naval service, when the porridge was set before him, he said: "Well, thank goodness, there is one thing about going into the navy. I won't have to eat this beastly stuff every morning of my life."

But to the surprise of the Prince his first breakfast in the navy began with stiff porridge handed out in wooden bowls. He knew what his duty was when he saw the knowing look exchanged by two senior officers, and swallowed the inevitable oatmeal.

## Oldest Lumber Concern

Lumbering 700 years is the record of a Swedish company. It is said to be the oldest lumber concern in existence. Because of its scientific methods, its forests, cut on a continuous yield basis, are in better condition today than ever before. Every seventy or eighty years the loggers turn to the same timber tract for cutting. The cut-over land problem does not exist.

## Has Never Employed Doctor

Marky Lumley at the grand old age of 105 takes the honor of being Toronto's oldest inhabitant. Throughout the long period he has never been under a doctor's care and lives in a flat over his son's barber shop. He was born in Sotherington near Scarborough, Yorkshire, England, and is a giant of a man.

Why does the man who declares his willingness to die for a woman always back out at the last moment?

A young man with a slender salary should marry a girl with a small waste.

## The Baby's Cold

Continual "coughing" with internal medicine upsets delicate little stomachs. Treat colds externally with Vicks. You just rub it on.

**VICKS**  
VAPORUB

WORLD HAPPENINGS  
BRIEFLY TOLD

A report in The London Sunday Express that Lord Peel probably would be the next Governor-General of Canada in succession to Lord Byng is emphatically denied by Lord Peel.

The oldest voter to go to the polls in Nova Scotia, and it is thought in Canada, was Miss Anna Fraser, of Antigonish, 105 years old, believed to be the oldest woman in the province.

Bishop Howard Nowell, of West China, a former Canadian, who was kidnapped with a party of missionaries in August, is reported to have returned to Chengtu.

Circumnavigation of the globe in a 34-foot cat boat was accomplished by Harry Hildgeon, 54 year old photographer, who has made port at San Pedro, Cal., after sailing 38,000 miles.

Eight hundred steers from Roderick Macleay, High River, Alta., the biggest single shipment of cattle since the war, reached Winnipeg recently in a train of 27 cars.

A school for women motor drivers has been opened at Leicester, Eng. The women will be given instruction on how to drive and will also be taught the principal working features of machines.

Reports from Berlin that Germany will insist upon the employment of German as an additional official language once Germany enters the League of Nations is not credited by the league officials.

Lieut.-Col. N. Donald, of Chemanus, B.C., formerly commander H.M.C.S. Armentieres, wrecked on the west coast of Vancouver Island during a dense fog some weeks ago, has been transferred to the command of H.M.C.S. Ypres at Halifax.

Maxim Gorky, who two years ago left Russia a "dying man," has now fully recovered his health and is writing every day on what he believes will be his masterpiece, a novel portraying life in Russia during the last forty years.

James Buchanan Price, who sold newspapers on the campus of Duke University, Oklahoma City, last year, has been informed that he is remembered as one of 16 relatives who will share \$2,000,000 left by the late tobacco king.

A wooden Indian has been sold as a curiosity in New York for \$250, after spirited bidding. He was one of the almost extinct tribes that used to guard every tobacco shop with a tomahawk and a box of wooden cheroots.

Word is received of the death while on a visit to Glasgow of Professor Mavor, formerly occupying the chair of political economy at University of Toronto. Professor Mavor, who was born in Scotland 71 years ago, was world-famous as an author and lecturer on economic subjects.

## Britain's Mystery Battleship

The Nelson By All Accounts Will Be Big Addition to British Navy

In England the battleship Nelson, which was launched on Sept. 3, has been called the "mystery ship," because the facts about her horsepower, the armor of her belt, deck, hullhead and gun positions, her secondary batteries, torpedo tubes and speed have been kept a secret. It is known only that her displacement will be 35,000 tons, her length 702 feet, her beam 106 feet and her draught 30 feet, and that her main battery will consist of nine 16-inch guns, one more than are carried by our most powerful three ships of the Maryland class. The Nelson is one of two battleships, the other being the Rodney, which the Washington Naval Treaty allows Great Britain to build that they may take the place of the King George V., Ajax, Centurion and Thunderer in 1927. Today the Japanese navy contains the most formidable battleships, the Matsushima and Nagato. They are superior to our three Marylands in being faster by two knots, 23 an hour to 21. That is their most considerable advantage. They are longer by 60 feet, but of about the same beam. The Japanese ships are furnished with eight torpedo tubes, the Americans with two. There are the same batteries, eight 16-inch guns. In secondary batteries the Japanese seem to have an advantage in twenty 5.5-inch guns, compared with twelve 5-inch guns, for the American ships. This advantage does not seem to be offset by eight 3-inch guns on the American ships. As one extra 16-inch gun might decide a sea fight, the two Nelsons, which the British admiralty will have in commission in 1927, must be considered more powerful than the best of Japan and of the United States.—Letter in New York Times.

Wembley Exhibition  
Not Financial Success

But Ultimate Results Will Be Incalculable in Money

The British Empire Exhibition, which opened at Wembley in 1924 to develop the trade of the British empire, closed its doors Oct. 31. The buildings will be immediately dismantled.

In the two years it has been running, 27,000,000 persons have visited the exhibition, but in spite of its popularity, largely due to the constant patronage of the King, the members of the Royal Family, and prominent personages, it has not proved a financial success.

It is contended, however, that the ultimate results will be incalculable in money.

Confidence is expressed that it will prove to have stimulated trade and aided in the development of the resources of the empire.

There was an elaborate closing programme.

Worms, by the irritation that they cause in the stomach and intestines, deprive infants of the nourishment that they should derive from food, and mal-nutrition is the result. Miller's Worm Powders destroy worms and correct the morbid conditions in the stomach and bowels that are favorable to worms, so that the full nutriment of the child is assured and development in every way encouraged.

## Virtual Slavery

Human Bondage Is Legalized in State of Jodhpur, India

While the League of Nations is taking active steps to suppress slavery in the western world, word comes from India that the council of the regency of Jodhpur has passed a law legalizing virtual human bondage in its territory.

The regulation, which was adopted while the Maharajah was attending polo games in England, inaugurates a system of serfdom, under which hired servants are made the virtual property of the gentry. The hired servants and their families are considered as chattels and often are given away as part of the dowry for the master's daughters. The dargah himself is now forced by law to live in a style inferior to the master.

## Export Of Canadian Cattle

Up to October 1st, 1925, Canada shipped to the British Isles a total of 77,242 live cattle, as against 58,691 in the same period in 1924, and 44,206 in 1923. It is considered probable that the aggregate before the end of the year will exceed 100,000 head.

## Sweden Developing Air Service

Nearly \$200,000 is being set aside by the Swedish Government this year for the establishment and maintenance of civil air services. A new air service between Stockholm and Danzig was established recently by Nordiska Flygredleret.

## Britain's Will To Recover

The Will to Win Always Uppermost in the British Character

The British nation is always at its best when it recognizes that it is "up against it." Some nations are at their highest pitch when everything seems to turn to their advantage, when they are being carried forward in the rush of a successful advance, and when applause is poured into their ears. Our own people, for some reason which is not entirely explicable, do not have either their alertness or their capacities fully developed until they know that they are near a disaster. This is probably as true of the nation in industry as it is certainly true of the nation in war. Macleay wrote a glowing passage about the British power of recovery. This power is with us still, we are convinced that all that is necessary to evoke it is to convince the people that the time has come. If we could recover, as we did, from the demoralization in the early part of the nineteenth century the proof is good enough that we can recover from almost anything—provided only that there is the will. We can hardly talk too much, then, about the desperateness of our position in the world's markets, for talk creates the necessary knowledge, and the will to apply the remedy will follow upon the knowledge. If history repeats itself the nation will go on announcing its approaching death for some time after the disaster is in a fair way to be cured. It is the curious habit of the British people to become suddenly aware of improvements which are due to their own individual energy and common sense but which they failed to notice during the process.—London Spectator.

New lines and details make this model unusually chic for both large and small women. It will be found one of the newest and smartest of the season's tailored frocks, developed in French style, and finds its freedom of movement in the inverted plaits at the side seams. Long revers cross the front diagonally and terminate in an extension which laps to the left hip, and then falls free. A vestee is set under the front, and the long sleeves are fitted at the wrist. The extension may be omitted and the sleeves made short. No. 1179 is in sizes 16, 18 and 20 years (or 34, 36 and 38 inches bust). Size 18 years (or 36 bust) requires 3 1/2 yards of 36 inch, or 3 3/4 yards of 40-inch material. Price 20 cents.

The designs illustrated in our new Fashion Book are advance styles for the home dressmaker, and the woman or girl who desires to wear garments dependable for taste, simplicity and economy will find her desires fulfilled in our patterns. Price of the book 10 cents the copy.

Settlers For Irrigation Area

An average of a new settler a day is being placed on the Lethbridge Northern Irrigation tract, states James Pike, manager for the tract under provincial government supervision.

Rub the scalp with Minard's Liniment

## The Frontier College

Provides Opportunity of Bringing Education to the Worker at His Work

The Frontier College has just published its first calendar. This contains many interesting educational features. While its courses are varied, there are no restrictions made by way of enforced attendance at some central institution.

It is the purpose of the Frontier College to offer varied courses for home study and thus encourage domicile in countryside and settlement. The Frontier College has set for itself the task of bringing education to the worker at his work. The established universities give prizes and scholarships on condition that men attend lectures; the Frontier College in order that they be encouraged to stay at home. In pursuance of this, university credits even, for a degree, are made available for all, who have the capacity, the energy and the time to study, whatever be the circumstances of their life and work.

But while much latitude is given in the matter of options there is no thought of cheapening the degree. In fact, certain subjects such as Forestry, Biology, Agriculture, subjects very vital to Canada, with its ever present problems of settlement, reforestation and immigration, are made compulsory. An examining board has been formed which numbers among its members many men who have already won a Dominion-wide reputation in their special fields. The calendar may be had upon application to the Frontier College, 67 Yonge Street, Toronto.

All Night with Asthma. Everyone knows how attacks of asthma often keep their victims awake the whole night long. Morning finds him wholly unfit for a day of business, and yet, business must still be carried through. All this night suffering and lack of rest can be avoided by the prompt use of Dr. J. D. Kellogg's Asthma Remedy, which positively does drive away the attacks.

## Wants Dominions' Status Defined

Effect of Locarno Security Pact Seems Doubtful Says Lord Burnham

Viscount Burnham, owner of The Daily Telegraph, and president of the Imperial Press Conference, addressing a gathering in London, touched on the question of the effect of the Locarno security pact on the dominions.

Lord Burnham said nobody had yet defined the matter as to what would be the international status of the self-governing dominions if Great Britain were involved in war. Would the dominions, he asked, supply arms and ammunition to an enemy, and would their harbors be open to enemy ships? On the other hand, would the enemy respect their neutrality?

If these questions were unsettled, Lord Burnham declared, he would not be satisfied that everything was well with the empire in connection with the Locarno pact.

Lord Burnham, at the outset of his address, said that before long it would be impossible for any of the dominions to remain ignorant of the trend of imperial policies.

No surgical operation is necessary in removing corns if Hollaway's Corn Remover be used.

## Trade With Britain

Arrangements are being made for the formation of a committee representing all the provinces of Canada to co-operate in placing Canadian produce on the British market in accordance with the suggestions of the Imperial economic committee of the British Government.

He: "And, mind this—no woman ever made a fool of me!"  
She: "Who did then, dear?"

The average weight of an elephant at birth is 165 pounds.

Large Red Pimples  
Itched Terribly  
Cuticura Heals

"My face became full of large, red, scaly pimples and at times they itched terribly. They spread in great blotches and formed large, sore eruptions that burned a great deal. I was ashamed to go anywhere on account of them, and the trouble kept getting worse. The trouble lasted about a year.

"I tried various kinds of ointments without success. I sent for a free sample of Cuticura Soap and Ointment and they helped me. I purchased more, and after using three boxes of Cuticura Ointment, together with the Cuticura Soap, I was healed in about two months."

(Signed) Miss Mildred M. Breaux, Crowsnest, Nova Scotia.

Prevent pimples by daily use of Cuticura Soap, assisted by touches of Cuticura Ointment when required. Dust with Cuticura Talcum.

Sample Pack Free by Mail. Address Canadian Depot: "Cuticura, Ltd., Montreal." Price, Soap 25c. Ointment 15c and 50c. Talcum 25c. Cuticura Shaving Stick 25c.

## Canada's Foreign Trade

Dominion Is Now Among First Six First Nations of the World

Canada's foreign trade now places her among the first six nations of the world as an exporting and importing country, a place which she has won not only by the export of her vast annual grain crops, but also as a manufacturing nation. In the year ending August 31, 1925, the exports of the Dominion reached new heights when the total value of her export trade was placed at \$1,120,753,557.

An Oil that Is Famous.—Though Canada was not the birthplace of Dr. Thomas' Eucalypti Oil, it is the home of that famous compound. From here its good name was spread to Central and South America, the West Indies, Australia and New Zealand. That is far ahead enough to attest its excellence, for in all these countries it is in use and in demand.

## B.C. Pulp Goes To Japan

Canadian pulp practically controls the Japanese market, as far as price is concerned. During last year between 2,000 and 3,000 tons of pulp from British Columbia have been imported to Japan, out of a total of some 3,500 to 5,000 tons from all countries. It is anticipated that Quebec will presently enter in the field.

More than 200,000 students enroll every year in agricultural schools of the United States.

Forest fires during last summer are blamed for a fur shortage.

### Poor Policy

By Walt Mason

There are men in gaudy rain-  
 ment, men who ride in costly cars,  
 who are slow in making payment  
 for the cod-fish and cigars. Oft  
 I hear the merchant princes make  
 complaint of such as they; "They  
 come in and buy our quinces, run  
 up bills and do not pay. We can  
 see them ride in splendor, scorching  
 on the sunlight hills, but they bring  
 no legal tender for our empty,  
 yawning tills. These misguided  
 men go tooling by the woods and  
 carriages, but no person are they  
 fooling, all the village knows the  
 facts. All the people know they're  
 dodging bills they should have long  
 since paid, heating bills for board  
 and lodging, for pling hats and  
 lemons. Oh, the butcher and  
 the grocer shudder when they see  
 these lads, for the sheriff's draw-  
 ing closer and they cannot get  
 their sends." These poor dead-  
 heads much desiring plandits as  
 they go their way, think the voters  
 are admiring all their splendor and  
 display. But as solemn as a Druid  
 the mortician says, says he, "Owing  
 for embalming fluid, still they  
 scamper o'er the lea." And the  
 druggist sadly twitters as he sees  
 them pass his shack. "They have  
 purchased jugs of bitters and they  
 let me hold the sack." And the  
 hardware man is saying, as he  
 weighs a three-inch nail, "They  
 have time for pomp and playing  
 but no time to bring the kale." Better  
 walk obscure and humble,  
 than to know a drivers' thrills  
 While the merchant princes  
 grumble, wishing you would pay  
 your bills.

"The Lost World" required 7  
 years to film and is without doubt  
 the most amazing drama ever  
 made. Saturday, Nov. 21, is the  
 opening date.—Rex Theatre.

Strayed or Stolen—Black Filly,  
 age 18 months, branded GO on  
 right hip. Lost from my place  
 about 2 months ago.—G.H. Organ,  
 Raymond.

### Basketball Entries

This season the A. A. B. A. will  
 operate the following leagues:

1. Men's senior, entrance fee \$5  
 per team.

2. Men's intermediate, \$5 per  
 team.

3. Men's high school and junior,  
 \$2.50 per team.

4. Women's senior, \$5 per team.

5. Women's intermediate, \$2.50  
 per team.

No restrictions as to players'  
 qualifications will be placed on the  
 senior or intermediate leagues in  
 either section, as any club may  
 enter two teams in the same  
 league.

In place of the men's high school  
 league, as in operation last year,  
 the men's high school and junior  
 league will be operated this year.  
 Junior teams must be comprised  
 of players who have not reached  
 their nineteenth birthday by Jan.  
 1, 1926.

This year the entries, accompan-  
 ied by fees, must be in the hands  
 of Sec. Treas., H. D. Weaver, Ray-  
 mond, on or before December 1.
